Microbial genomics challenge Darwin Didier Raoult, Eugene V. Koonin, The 200th anniversary of Darwin's birthday was celebrated in 2009 making the concept of Darwinism even more popular than at the time it was originally proposed to the extent that it has acquired quasi religious status His theory revolves around a Tree of Life in which all living organisms are considered to have descended from a single ancestor and each node represents a common ancestor It comprises hierarchy and dichotomy which are typical characteristics of the post biblical 19th century vision Indeed according to post modern philosophy also called the French theory the majority of theories including scientific ones are based only on meta narratives expressing the influence of a culture at a given time Buddhism or Hinduism may have generated a very different story of evolution Our way of thinking about life and the way we describe evolution have changed radically in the 21st century due to the genomic revolution Comparative genome analyses have demonstrated that gene repertoires are characterized by plasticity and there is strong evidence that nearly all genes have been exchanged at some point Genomic data show that the genetic information of living organisms is inherited not only vertically but also laterally Lateral gene transfers were at first observed only in bacteria which contain genes originating from eukaryotes Archaea and viruses Such transfers were subsequently identified in all living organisms giant viruses have chimeric genomes and the human genome is a mosaic of genes with eukaryotic bacterial and viral origins We cannot identify a single common ancestor for the gene repertoire of any organism Furthermore a very high proportion of genes have been newly created through gene fusion or degradation and others show no homology to sequences found in other species It is now clear that every living organism has a variety of ancestors while exchanges between species are intense and the creation of new genes is frequent and permanent in all living organisms Our current genomic knowledge contradicts the tree of life theory as established by Darwin Recent analyses have produced bushes rather than resolved trees with the structure of some parts remaining elusive It becomes more and more obvious that phylogenetic relationships are better described by forests and networks and that species evolution looks more like a rhizome The chimerism and mosaic structure of all living organisms through both non vertical inheritance and de novo creation can only be assimilated and described by a post Darwinist concept In this Research Topic we wish to highlight the influence of microbiology and genomics on our understanding of the complexity of gene repertoires and also demonstrate how current knowledge does not support Darwin's theory Microbiology has offered a great advance in the way we perceive life Evidence obtained from studies on bacterial and viral evolution lateral inheritance phylogenetic trees and biodiversity continues to challenge what constituted until recently an unimpeded dogma in biology *COVID-19 Pandemic - Philosophical Approaches* Nicolae Sfetcu, 2020 The paper begins with a retrospective of the debates on the origin of life the virus or the cell The virus needs a cell for replication instead the cell is a more evolved form on the evolutionary scale of life In addition the study of viruses raises pressing conceptual and philosophical questions about their nature their classification

and their place in the biological world The subject of pandemics is approached starting from the existentialism of Albert Camus and Sartre the replacement of the exclusion ritual with the disciplinary mechanism of Michel Foucault and about the Gaia hypothesis developed by James Lovelock and supported in the current pandemic by Bruno Latour The social dimensions of pandemics their connection to global warming which has led to an increase in infectious diseases and the deforestation of large areas which have caused viruses to migrate from their native area their reservoir are highlighted below The ethics of pandemics is approached from several philosophical points of view of which the most important in a crisis of such global dimensions is utilitarianism which involves maximizing benefits for society in direct conflict with the usual Kantian view of respect for people as individuals After a retrospective of the COVID 19 virus that caused the current pandemic its life cycle and its history with an emphasis on the philosophy of death the concept of biopower initially developed by Foucault is discussed with reference to the practice of modern states of control of the populations and the debate generated by Giorgio Agamben who states that what is manifested in this pandemic is the growing tendency to use the state of emergency as a normal paradigm of government An interesting and much debated approach is the one generated by the works of Slavoj Žižek who states that the current pandemic has led to the bankruptcy of the current barbaric capitalism wondering if the path that humanity will take is a neo communism Another important negative effect is desocialization with the conclusion of some philosophers that we cannot exist independently of our relationships with others that a person's humanity depends on the humanity of those around him The last section is dedicated to forecasting what the world will look like after the pandemic and there are already signs of a paradigm shift including the sudden disappearance of the wall ideology a cough was enough to make it suddenly impossible to avoid the responsibility that every individual has it towards all living beings for the simple fact that he is part of this world and of the desire to be part of it The whole is always involved in part because everything is in a sense in everything and in nature there are no autonomous regions that are an exception The COVID 19 pandemic seems to restore the supremacy that once belonged to politics One of the virtues of the virus is its ability to generate a more sober idea of freedom to be free means to do what needs to be done in a specific situation

Die Evolution kaum eine Kraft innerhalb der Natur ist faszinierender und gleichzeitig auch komplexer in seinem Wesen Dank der umfangreichen Informationen die wir heute bereits über die Evolution gesammelt haben ist es uns möglich ein sehr detailreiches Bild zu zeichnen von eben jener Kraft die nicht nur unsere eigenen Körper erschuf sondern auch alle anderen Wunder der belebten Welt um uns herum Mit diesem Buch begeben wir uns auf eine wahrhaft epochale Reise durch die letzten 542 Millionen Jahre der Erdgeschichte Für diese Reise betrachten wir die Evolution als Fluss der durch die Zeit fließt und kein Wasser enthält sondern die Gene und Genome aller Lebewesen die jemals auf der Erde gelebt haben Gewissermaßen

reisen wir gemeinsam mit unseren Genen durch die Erdgeschichte und begleiten sie auf ihrer Reise durch die Zeit Denn auch die Gene die heute unsere Körper und unseren Geist formen waren zu jedem Zeitpunkt dieser einmaligen Geschichte anwesend The Evolution of the Virus World ASM Press,Eugene V. Koonin,Valerian Dolja,2013-10-15 In 1926-27 the Soviet Central Statistical Administration initiated several yearlong expeditions to gather primary data on the whereabouts economy and living conditions of all rural peoples living in the Arctic and sub Arctic at the end of the Russian civil war Due partly to the enthusiasm of local geographers and ethnographers the Polar Census grew into a massive ethnological exercise gathering not only basic demographic and economic data on every household but also a rich archive of photographs maps kinship charts narrative transcripts and museum artifacts To this day it remains one of the most comprehensive surveys of a rural population anywhere The contributors to this volume all noted scholars in their region have conducted long term fieldwork with the descendants of the people surveyed in 1926-27 This volume is the culmination of eight years work with the primary record cards and was supported by a number of national scholarly funding agencies in the UK Canada and Norway It is a unique historical ethnographical analysis and of immense value to scholars familiar with these communities contemporary cultural dynamics and legacy Origin and Evolution of Viruses Esteban Domingo,Colin R. Parrish,John J. Holland,2008-06-23 New viral diseases are emerging continuously Viruses adapt to new environments at astounding rates Genetic variability of viruses jeopardizes vaccine efficacy For many viruses mutants resistant to antiviral agents or host immune responses arise readily for example with HIV and influenza These variations are all of utmost importance for human and animal health as they have prevented us from controlling these epidemic pathogens This book focuses on the mechanisms that viruses use to evolve survive and cause disease in their hosts Covering human animal plant and bacterial viruses it provides both the basic foundations for the evolutionary dynamics of viruses and specific examples of emerging diseases NEW methods to establish relationships among viruses and the mechanisms that affect virus evolution UNIQUE combines theoretical concepts in evolution with detailed analyses of the evolution of important virus groups SPECIFIC Bacterial plant animal and human viruses are compared regarding their interaction with their hosts Comparative Genomics and Evolution of Complex Viruses V.
