Online Book Last Futures Nature Technology Architecture:

Practiceopolis: Stories from the Architectural Profession Yasser Megahed, 2020-07-30 This is a graphic novel about the contemporary architectural profession in which it acts as the protagonist in the form of an imaginary city called Practiceopolis. The novel narrates quasi-realistic stories that exaggerate the architectural everyday and the tacit in order to make them prominent and tangible. They depict and dramatise the value conflicts between the different cultures of practising architecture and between the architectural profession and other members of the building industry as political conflicts around the future of Practiceopolis. The book uses the metaphorical world of Practiceopolis to provoke big questions about everyday routines in the profession that practitioners may take for granted and to examine different ideologies at work among architects and other members of the construction industry. The novel ends in the tradition of dystopian worlds common in a certain strand of graphic novels. By vividly illustrating and narrating the critical issues he interrogates, the author has created a world which any architect student or professional will both instantly recognise and simultaneously reject, provoking the reader to challenge themselves and the profession at large.

Dark Futures Nick Dunn, 2025-03-25 Dark Futures provides a new way of thinking about the world. Light is everywhere, often uninvited, as a by-product of our contemporary lives. Darkness meanwhile appears unwanted yet is essential to our wellbeing, other species, and our planet. When we consider what futures are possible, they tend to direct us to visions of either a shiny frictionless world which is light and bright, or at the other end of the spectrum, they are fearsome shadowy dystopias. This book reclaims darkness to think through alternative futures which are neither environmentally catastrophic nor technologically evangelical. Dark Futures proposes a new philosophy in which darkness is embraced as an emancipatory space for positive thought and creative expression. By revealing fresh ideologies that can empower sustainable and ethical relationships with our ecologies and our technologies, this book sets out a new vision for the futures of collective life.

The Future of Learning Design Shirley Agostinho, Sue Bennett, Lori Lockyer, Barry Harper, 2013-09-13 Learning Design refers to research and development work that equips teachers with tools and strategies to aid their design thinking. Its origin stems from two lines of inquiry: i) how to represent teaching practice from a technical perspective in the development and delivery of online learning environments, and ii) how to represent teaching practice in an appropriate form to enable teachers to share ideas about innovative online pedagogy and think about the process of design. The underlying premise of learning design is that if effective teaching and learning practice can be represented in a systematic way, thus supporting the process of reuse, which could ultimately lead to improved practice. A large international body of work has produced specifications of technical standards to support the delivery of online learning, different learning design representations to disseminate best practice examples to support and encourage adaptation, and software tools and strategies to support the design process. This book presents a view of current thinking about learning design and provides insight into the future direction of this field of research and development. It is a

timely contribution that will stimulate discussion about these issues and guide and advance the learning design field This book was originally published as a special issue of Learning Media and Technology *Precedented Environmental Futures* Colin Porteous,2019-04-17 This book addresses the built environment through the lens of environmental architecture and in a holistic manner It moves gradually from psychophysiology and thinking doing feeling modalities through environmental criteria to environmental modulation concluding with a debate around mitigation and adaptation Much use is made of re interpreting past quotations seen as relevant for environmental architecture No definitive conclusions are reached but rather broad discursive messages are offered The text will have lasting luminance for new generations involved with the built environment *The Architecture of Phantasmagoria* Libero Andreotti,Nadir Lahiji,2016-11-10 In a time of mass mediated modernity the city becomes almost by definition a constitutively mediated city Today more than ever before the omnipresence of media in every sphere of culture is creating a new urban ontology saturating fracturing and exacerbating the manifold experience of city life The authors describe this condition as one of hyper mediation a qualitatively new phase in the city s historical evolution The concept of phantasmagoria has pride of place in their study using it as an all embracing explanatory framework they explore its meanings as a critical category to understand the culture and the architecture of the contemporary city Andreotti and Lahiji argue that any account of architecture that does not include understanding the role and function of media and its impact on the city in the present tele technological capitalist society is fundamentally flawed and incomplete Their approach moves from Walter Benjamin through the concepts of phantasmagoria and of media as theorized also by Theodor Adorno Siegfried Kracauer and a new generation of contemporary critics towards a new socio critical and aesthetic analysis of the mediated space of the contemporary city *Play Among Books* Miro Roman,Alice_ch3n81,2021-12-06 How does coding change the way we think about architecture This question opens up an important research perspective In this book Miro Roman and his AI Alice_ch3n81 develop a playful scenario in which they propose coding as the new literacy of information They convey knowledge in the form of a project model that links the fields of architecture and information through two interwoven narrative strands in an infinite flow of real books Focusing on the intersection of information technology and architectural formulation the authors create an evolving intellectual reflection on digital architecture and computer science **Botanical Architecture** Paul Dobraszczyk,2024-11-12 An original call to reorient architecture around our relationship to plants When we look at trees we see a form of natural architecture and yet we have seemingly always exploited trees to make new buildings of our own Whereas a tree creates its own structure humans generally destroy other things to build with increasingly disastrous consequences In Botanical Architecture Paul Dobraszczyk looks closely at how elements of plants seeds roots trunks branches leaves flowers and canopies compare with and constitute human made buildings Given the omnipresence of plant life in and around our structures Dobraszczyk argues that we ought to build as much for plants as for ourselves understanding that our lives are always totally dependent on theirs

Botanical Architecture offers a provocative and original take on the relationship between ecology and architecture

Philosophers of Technology Stig Børsen Hansen, 2020-09-07 Technology is increasingly subject of attention from philosophers Philosophical reflection on technology exhibits a wide and at times bewildering array of approaches and modes of thought This volume brings to light the development of three schools in the philosophy of technology Based on thorough introductions to Karl Marx Martin Heidegger's and John Dewey's thought about technology the volume offers an in depth account of the way thinkers in the critical the phenomenological and the pragmatic schools have responded to issues and challenges raised by the works of the founders of these schools Technologies in almost any aspect of human life is potentially subject of philosophical treatment To offer a focused demonstration of key arguments and insights the presentation of each school is concluded with a contribution to discussions of educational technologies In addition to philosophers seeking a valuable and clear structuring of a still burgeoning field the volume is of interest to those working with educational philosophy and value sensitive design Stig Børsen Hansen's book is a must for all interested in understanding the development of the philosophy of technology and the relation of thoughts of thinkers that have shaped the area The author presents a new and refreshing take on the ideas from Marx to Marcuse from Dewey to Latour and Heidegger to Borgmann It will engage and hopefully provoke Dr Jan Kyrre Berg Friis University of Copenhagen

Future Cities Nick Dunn, Paul Curren, 2020-12-10 What might our cities look like in ten twenty or fifty years How may future cities face global challenges Imagining the city of the future has long been an inspiration for many architects artists and designers This book examines how cities of the future have been visualised what these projects sought to communicate and what the implications may be for us now It provides a visual history of the future and explores the relationships between different visualisation techniques and ideologies for cities Thinking about what futures are who they are for why they are desirable and how and when they are to be brought into being is central to this book Through visualisation we are able to experiment in ways that would be impractical and potentially hazardous in the real world and this book therefore aims to contribute toward a better understanding of the power and agency of visualisations for future cities In this lavishly illustrated text the authors apply several critical lenses to consider the subject in different ways technological futures social futures and global futures providing a comprehensive survey and analysis of visions for future cities and engaging creatively with how we perceive tomorrow's world and future studies more widely

Future Cities Paul Dobraszczyk, 2025-03-15 Brings together architecture fiction film and visual art to reconnect the imaginary city with the real proposing a future for humanity that is firmly grounded in the present and the diverse creative practices already at our fingertips Though reaching ever further toward the skies today's cities are overshadowed by multiple threats climate change overpopulation social division and urban warfare all endanger our metropolitan way of life The fundamental tool we use to make sense of these uncertain city futures is the imagination Architects artists filmmakers and fiction writers have long been inspired to imagine cities of the future but

their speculative visions tend to be seen very differently from scientific predictions flights of fancy on the one hand versus practical reasoning on the other In a digital age when the real and the fantastic coexist as near equals it is especially important to know how these two forces are entangled and how together they may help us best conceive of cities yet to come Exploring a breathtaking range of imagined cities submerged floating flying vertical underground ruined and salvaged Future Cities teases out the links between speculation and reality arguing that there is no clear separation between the two In the Netherlands prototype floating cities are already being built Dubai s recent skyscrapers resemble those of science fiction cities of the past while makeshift settlements built by the urban poor in the developing world are already like the dystopian cities of cyberpunk

Limiting Outer Space Alexander C.T. Geppert,2018-04-18

Limiting Outer Space propels the historicization of outer space by focusing on the Post Apollo period After the moon landings disillusionment set in Outer space no longer considered the inevitable destination of human expansion lost much of its popular appeal cultural significance and political urgency With the rapid waning of the worldwide Apollo frenzy the optimism of the Space Age gave way to an era of space fatigue and planetized limits Bringing together the history of European astroculture and American Soviet spaceflight with scholarship on the 1970s this cutting edge volume examines the reconfiguration of space imaginaries from a multiplicity of disciplinary perspectives Rather than invoking oft repeated narratives of Cold War rivalry and an escalating Space Race Limiting Outer Space breaks new ground by exploring a hitherto underrated and understudied decade the Post Apollo period
