Francis,2007-05-25 As a web user you ll no doubt have noticed some of the breathtaking applications available in today s

modern web such as Google Maps and Flickr desktop applications than the old style web sites you are used to. You've probably also wished that you could create such things and then thought nahhh I'd need to know a lot of complicated code to be able to even start creating sites like these. Well, think again. There is a lot of complicated code involved in cutting edge Ajax style web applications but a lot of the hard work is already done for you and available on the Web. JavaScript libraries exist to provide most of that Ajax DOM Scripting functionality out of the box. Application programming interfaces (APIs) exist to allow you to transplant complicated applications such as Google Maps and Flickr right into your own web sites. And hosting services such as Flickr and YouTube provide all you need to store and retrieve your media be it images, video or whatever at your leisure without having to worry about bandwidth issues and file naming nightmares. All you need to know is enough to successfully wire together all this functionality successfully and responsibly and this book shows you how. It starts from the very beginning of your journey showing you what's available, what you need and how to set up an effective development environment. After a solid base has been built it shows you how to build up each aspect of your site including storing, retrieving and displaying content, adding images and video to your site, building effective site navigation and laying it all out beautifully using CSS, promoting your content so you will attract visitors to your site and adding special effects to enhance usability and design aesthetics all with ready made functionality available on the Web.
