Network and Discrete Location Mark S. Daskin, 2011-02-14 The comprehensive introduction to the art and science of locating facilities to make your organization more efficient effective and profitable For the professional siting facilities the task of translating organizational goals and objectives into concrete facilities requires a working familiarity with the theoretical and practical fundamentals of facility location planning and modeling The first hands on guide to using and developing facility location models Network and Discrete Location offers a practice oriented introduction to model building methods and solution algorithms complete with software to solve classical problems of realistic size and end of chapter exercises to enhance the reader's understanding The text introduces the reader to the key classical location problems covering center median and fixed charge which form the nucleus of facility location modeling It also discusses real life extensions of the basic models used in locating production and distribution facilities interacting services and facilities and undesirable facilities. The book outlines a host of methodological tools for solving location models and provides insights into when each approach is useful and what information it provides Designed to give readers a working familiarity with the basic facility location model types as well as an intuitive knowledge of the uses and limits of modeling techniques Network and Discrete Location brings students and professionals alike swiftly from basic theory to technical fluency im Luftverkehr Mark Jacquemin, 2007-12-31 Auf der Basis der hierarchischen Planung entwickelt Mark Jacquemin zwei stochastisch dynamische Planungsans tze zur Gestaltung von Hub Spoke Flugnetzwerken die zur Unterst tzung der strategischen Netzentwicklung herangezogen werden k nnen Er zeigt wie diese Planungsans tze in moderne Informations und Kommunikationssysteme von Fluggesellschaften integriert werden k nnen und pr sentiert eine Software Applikation die den Entscheidungstr ger bei der Netzentwicklung interaktiv unterst tzt Networks in Action Gerard Sierksma, Diptesh Ghosh,2009-12-11 One of the most well known of all network optimization problems is the shortest path problem where a shortest connection between two locations in a road network is to be found This problem is the basis of route planners in vehicles and on the Internet Networks are very common structures they consist primarily of a nite number of locations points nodes together with a number of links edges arcs connections between the locations Very often a certain number is attached to the links expressing the distance or the cost between the end points of that connection Networks occur in an extremely wide range of applications among them are road networks cable networks human relations networks project scheduling networks production networks distribution networks neural networks of atoms in molecules In all these cases there are objects and relations between the objects A n work optimization problem is actually nothing else than the problem of nding a subset of the objects and the relations such that a certain optimization objective is satis ed Handbook of Networks in Power Systems II Alexey Sorokin, Steffen Rebennack, Panos M. Pardalos, Niko A. Iliadis, Mario V. F. Pereira, 2012-03-02 Energy has been an inevitable component of human lives for decades Recent rapid developments in the
