Dynamics is what characterizes virtually all phenomenae we face in the real world and processes that proceed in practically all kinds of inanimate and animate systems notably social systems For our purposes dynamics is viewed as time evolution of some characteristic features of the phenomenae or processes under consideration It is obvious that in virtually all non trivial problems dynamics can not be neglected and should be taken into account in the analyses to first get insight into the problem consider and second to be able to obtain meaningful results A convenient tool to deal with dynamics and its related evolution over time is to use the concept of a dynamic system which for the purposes of this volume can be characterized by the input control state and output spaces and a state transition equation Then starting from an initial state we can find a sequence of consecutive states outputs under consecutive inputs controls That is we obtain a trajectory The state transition equation may

be given in various forms exemplified by differential and difference equations linear or nonlinear deterministic or stochastic or even fuzzy imprecisely specified fully or partially known etc These features can give rise to various problems the analysts may encounter like numerical difficulties instability strange forms of behavior e g chaotic etc This volume is concerned with some modern tools and techniques which can be useful for the modeling of dynamics We focus our attention on two important areas which play a key role nowadays namely automation and robotics and biological systems We also add some new applications which can greatly benefit from the availability of effective and efficient tools for modeling dynamics exemplified by some applications in security systems

Soft Computing for Hybrid Intelligent Systems Oscar Castillo, Patricia Melin, Witold Pedrycz, 2008-08-25 We describe in this book new methods and applications of hybrid intelligent systems using soft computing techniques Soft Computing SC consists of several intelligent computing paradigms including fuzzy logic neural networks and evolutionary al rithms which can be used to produce powerful hybrid intelligent systems The book is organized in five main parts which contain a group of papers around a similar subject The first part consists of papers with the main theme of intelligent control which are basically papers that use hybrid systems to solve particular problems of control The second part contains papers with the main theme of pattern recognition which are basically papers using soft computing techniques for achieving pattern recognition in different applications The third part contains papers with the themes of intelligent agents and social systems which are papers that apply the ideas of agents and social behavior to solve real world problems The fourth part contains papers that deal with the hardware implementation of intelligent systems for

solving particular problems The fifth part contains papers that deal with modeling simulation and optimization for real world applications *Soft Computing and Intelligent Systems Design* Fakhreddine O. Karray, Clarence W. De Silva, 2004

Traditional artificial intelligence AI techniques are based around mathematical techniques of symbolic logic with programming in languages such as Prolog and LISP invented in the 1960s These are referred to as crisp techniques by the soft computing community The new wave of AI methods seeks inspiration from the world of biology and is being used to create numerous real world intelligent systems with the aid of soft computing tools These new methods are being increasingly taught at the upper end of the curriculum sometimes as an adjunct to traditional AI courses and sometimes as a replacement for them Where a more radical approach is taken and the course is being taught at an introductory level we have recently published Negnevitsky's book Karray and Silva will be suitable for the majority of courses which will be found at an advanced level Karray and de Silva cover the problem of control and intelligent systems design using soft computing techniques in an integrated manner They present both theory and applications including industrial applications and the book contains numerous worked examples problems and case studies Covering the state of the art in soft computing techniques the book gives the reader sufficient knowledge to tackle a wide range of complex systems for which traditional techniques are inadequate **Soft Computing in Industrial Applications** Václav Snášel, Pavel Krömer, Mario Köppen, Gerald

Schaefer, 2013-11-20 This volume of *Advances in Intelligent Systems and Computing* contains accepted papers presented at WSC17 the 17th Online World Conference on Soft Computing in Industrial Applications held from December 2012 to January 2013 on the Internet WSC17 continues a successful series of scientific events started over a decade ago by the World Federation of Soft Computing It brought together researchers from over the world interested in the ever advancing state of the art in the field Continuous technological improvements make this online forum a viable gathering format for a world class conference The aim of WSC17 was to disseminate excellent research results and contribute to building a global network of scientists interested in both theoretical foundations and practical applications of soft computing The 2012 edition of the Online World Conference on Soft Computing in Industrial Applications consisted of general track and special session on Continuous Features Discretization for Anomaly Intrusion Detectors Generation and special session on Emerging Theories and Applications in Transportation Science A total of 33 high quality research papers were accepted after a rigorous review process and are provided in this book *A Journey Towards Bio-inspired Techniques in Software Engineering* Jagannath

Proceedings of the International Conference on Smart Materials, Structures and Systems, 1999 New Learning Paradigms in Soft Computing Lakhmi C. Jain, Janusz Kacprzyk, 2013-06-05 Learning is a key issue in the analysis and design of all kinds of intelligent systems In recent time many new paradigms of automated machine learning have been proposed in the literature Soft computing that has proved to be an effective and efficient tool in so many areas of science and technology seems to offer new qualities in the realm of machine learning too The purpose of this volume is to present some new learning paradigms that have been triggered or at least strongly influenced by soft computing tools and techniques mainly related to neural networks fuzzy logic rough sets and evolutionary computations Artificial Intelligence and Integrated Intelligent Information Systems Xuan F. Zha, 2007-01-01 Researchers in the evolving fields of artificial intelligence and information systems are constantly presented with new challenges Artificial Intelligence and Integrated Intelligent Information Systems Emerging Technologies and Applications provides both researchers and professionals with the latest knowledge applied to customized logic systems agent based approaches to modeling and human based models Artificial Intelligence and Integrated Intelligent Information Systems Emerging Technologies and Applications presents the recent advances in multi mobile agent systems the product development process fuzzy logic systems neural networks and ambient intelligent environments among many other innovations in this exciting field *Soft Sensors for Monitoring and Control of Industrial Processes* Luigi Fortuna, Salvatore Graziani, Alessandro Rizzo, Maria Gabriella Xibilia, 2007-05-31 focussed on the key steps in soft sensor design data selection model structure selection and model validation respectively Extensions to the basic steps of soft sensor design namely soft sensor performance enhancement and the modifications needed to facilitate different industrial process applications follow in Chapter 7 and 8 respectively Widening the applications range and role of soft sensors to fault detection and sensor validation configurations is dealt with in Chapter 9 A great strength of *Soft Sensors for Monitoring and Control of Industrial Processes* is the use throughout the text of a set of industrial case studies to demonstrate the successes and drawbacks of the different methods used to create soft sensor models A number of different methods may be used in each separate step of the soft sensor design process and the industrial case studies are often used to provide explicit comparisons of the performance of these methods The industrial control and process engineer will find these comparison exercises invaluable illustrations of the sort of results that might be found in industrial applications The monograph also highlights the importance of using knowledge from industrial experts and from the existing industrial process literature This is an important aspect of industrial control that is not very widely acknowledged or taught in control courses Most industrial processes have already generated a significant experimental knowledge base and the control engineer should develop ways of tapping into this valuable resource when designing industrial control schemes
