Research Phyllis V. Strong, 2004 Meningitis is an infection of the fluid of a person s spinal cord and the fluid that surrounds
the brain People sometimes refer to it as spinal meningitis Meningitis is usually caused by a viral or bacterial infection
Knowing whether meningitis is caused by a virus or bacterium is important because the severity of illness and the treatment
differ Viral meningitis is generally less severe and resolves without specific treatment while bacterial meningitis can be quite
severe and may result in brain damage hearing loss or learning disability For bacterial meningitis it is also important to know
which type of bacteria is causing the meningitis because antibiotics can prevent some types from spreading and infecting
other people Before the 1990s Haemophilus influenzae type b Hib was the leading cause of bacterial meningitis but new
vaccines being given to all children as part of their routine immunizations have reduced the occurrence of invasive disease
due to H influenzae Today Streptococcus pneumoniae and Neisseria meningitidis are the leading causes of bacterial
