Neuropathology S. Love, 2012-12-06 In commissioning this volume of Current Topics in Pathology the editor of the series Prof Sir Colin Berry asked me to produce something which is aimed at the general pathologist but from the point of view of the neuropathologist who knows what is not being done well This was easier said than done Many aspects of neuropathology are encountered only infrequently in general pathology and are best dealt with by referral of material to a specialist unit Others need more extensive investigation than is practicable in a general pathology setting Yet neurological disorders in general are common and are encountered by general histopathologists paediatric and forensic pathologists on a daily basis particularly in autopsy practice In inviting contributions to this volume of Current Topics in Pathology I therefore biased the contents towards disorders in which the conduct of the autopsy and the initial approach to neuropathological investigation

are of critical importance in making the diagnosis The authors all have a wealth of experience and expertise and I believe that this is reflected in their approach which is both personal and practical Indeed the emphasis in this book is very much on the provision of practical advice All of the chapters contain guidelines on the conduct of autopsies as well as information on the macroscopic and basic histological assessment of the nervous system in the relevant disorders The Smartbook of Neurosurgery Elizabeth Ogando-Rivas, Jesus Q. Beltran, Alfredo Quiñones-Hinojosa, This book has been done thinking about the most common challenging situations and questions that come during the daily activities as a resident or young neurosurgeon Introducing The Smartbook of Neurosurgery is a concise informative useful and evidence based guide for residents young neurosurgeons and health care professionals interested in neurosurgery This book has been thought about the most common challenging situations and questions that come during the daily activities as a resident or young neurosurgeon This book contains over 2 000 questions divided into 8 chapters and these chapters include basic translational clinical and surgical scenarios The question and answer for the topics Neuroanatomy Neurophysiology neurological surgery Neuropharmacology Neuroradiology cranial and brain surgery Neuroradiology Neuropathology Neurology Pediatric Neurosurgery Spine Surgery Peripheral Nerve Tips and Tricks on the cranial approach intracranial tumor neurosurgery endoscopic neurosurgery acromegaly cerebrovascular surgery and cranial trauma neurosurgery are clearly defined as The Smartbook of Neurosurgery This book represents a resource for on the fly consults on a busy hospital day as a refresher for boards and to prepare medical students for their neurosurgical rotations or before getting into the residency Anatomic Pathology Board Review Jay H.
