networking of microprocessors promise a day when networked computers are embedded throughout the everyday world. However, our current understanding of what such systems would be like is insufficient to bring the promise to reality. *Embedded Everywhere* explores the potential of networked systems of embedded computers and the research challenges arising from embedding computation and communications technology into a wide variety of applications from precision agriculture to automotive telematics to defense systems. It describes how these emerging networks operate under unique constraints not present in more traditional distributed systems such as the Internet. It articulates how these networks will have to be dynamically adaptive and self-configuring and how new models for approaching programming and computation are necessary. Issues relating to trustworthiness, security, safety, reliability, usability, and privacy are examined in light of the ubiquitous nature of these systems. A comprehensive systems-oriented research agenda is presented along with recommendations to major federal funding agencies.

Networking the World, 1794-2000 Armand Mattelart,2000 In the age of satellites and the Internet worldwide communication has become increasingly unified amid overblown claims about the redemptive possibilities of international networks But this rhetoric is hardly new As Armand Mattelart demonstrates in *Networking the World 1794 2000* globalization and its attendant hype have existed since road and rail were the fastest way to move information Mattelart places contemporary global communication networks into historical context and shows that the networking of the world began much earlier than many assume in the late eighteenth century He argues that the internationalization of communication was spawned by such Enlightenment ideals as universalism and liberalism and examines how the development of global communications has been inextricably linked to the industrial revolution modern warfare and the emergence of nationalism Throughout Mattelart eloquently argues that discourses of better living through globalization often mask projects of political economic and cultural domination
