Neural Bases of Motor Behaviour F. Lacquaniti, P. Viviani, 2013-04-17 Proceedings of the NATO Advanced Study Institute on Multi Sensory Control of Movement Trieste Italy 3 12 July 1994 **Neural Bases of Motor Behaviour** F. Lacquaniti, P. Viviani, 1996-05-31 Proceedings of the NATO Advanced Study Institute on Multi Sensory Control of Movement Trieste Italy 3 12 July 1994 American Book Publishing Record ,1999 Self-consciousness and "split" Brains Elizabeth Schechter, 2018

Could a single human being ever have multiple conscious minds Some human beings do The corpus callosum is a large pathway connecting the two hemispheres of the brain In the second half of the twentieth century a number of people had this pathway cut through as a treatment for epilepsy They became colloquially known as split brain subjects After the two hemispheres of the brain are cortically separated in this way they begin to operate unusually independently of each other in the realm of thought action and conscious experience almost as if each hemisphere now had a mind of its own Philosophical discussion of the split brain cases has overwhelmingly focused on questions of psychological identity in split brain subjects questions like How many subjects of experience is a split brain subject How many intentional agents How many persons On the one hand under experimental conditions split brain subjects often act in ways difficult to understand except in terms of each of them having two distinct streams or centers of consciousness Split brain subjects thus evoke the duality intuition that a single split brain human being is somehow composed of two thinking experiencing and acting things On the other hand a split brain subject nonetheless seems like one of us at the end of the day rather than like two people sharing one body In other words split brain subjects also evoke the unity intuition that a split brain subject is one person Elizabeth Schechter argues that there are in fact two minds subjects of experience and intentional agents inside each split brain human being right and left On the other hand each split brain subject is nonetheless one of us The key to reconciling these two claims is to understand the ways in which each of us is transformed by self consciousness The Multiple Functions of Sensory-motor Representations Raffaella I. Rumiati, Raffaella I Rumiati, Alfonso Caramazza, 2005 The papers in this volume consider the role of sensory motor processes and their neural structures in higher cognitive functions such as visual and motor imagery iconic memory and temporal judgment The evidence brought to bear on this issue comes from behavioral studies of brain damaged subjects and fMRI and TMS studies with normal subjects The issue also includes several theoretical reviews and discussions

Books in Print ,1994 New Frontiers in Mirror Neurons Research Pier Francesco Ferrari, Giacomo Rizzolatti, 2015-10-08 The discovery of mirror neurons caused a revolution in neuroscience and psychology Nevertheless because of their profound impact within life sciences mirror neuron are still the subject of numerous debates concerning their origins and their functions With more than 20 years of research in this area it is timely to synthesise the expanding literature on this topic New frontiers in Mirror Neurons provides a comprehensive overview of the latest advances in mirror neurons research accessible both to experts and to non experts In the book leading scholars draw on the latest research to

examine methodological approaches theoretical implications and the latest findings on mirror neurons research A broad range of topics are covered within the book basic findings and new concepts in action perception theory functional properties and evolution development and clinical implications In particular the last two sections of the book outline the importance of the plasticity and development of the mirror neuron system This knowledge will be key in future research for helping us understand possible disorders associated with impairments in the mirror neurons system as well as in helping us design new therapeutic tools for interventions within the field of neurodevelopmental disorders and in neurorehabilitation *New Frontiers in Mirror Neurons* is an exciting new work for neuroscientists psychologists and philosophers of mind *Directory of Published Proceedings*, 1998 *Principles of Frontal Lobe Function* Donald T. Stuss, Robert T. Knight, 2013 *Principles of Frontal Lobe Function* Second Edition is an expanded volume divided into 9 sections representing major research and clinical disciplines including new topics such as social neuroscience This book will provide clinicians researchers and students with the most current information as the mystery of the frontal lobes is unraveled **Medical and Health Care Books and Serials in Print**, 1997 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), *The British National Bibliography* Arthur James Wells, 2000 *Robots and Biological Systems: Towards a New Bionics?* Paolo Dario, Giulio Sandini, Patrick Aebischer, 2012-12-06 Bionics evolved in the 1960s as a framework to pursue the development of artificial systems based on the study of biological systems Numerous disciplines and technologies including artificial intelligence and learning devices information processing systems architecture and control perception sensory mechanisms and bioenergetics contributed to bionics research This volume is based on a NATO Advanced Research Workshop within the Special Programme on Sensory Systems for Robotic Control held in Il Ciocco Italy in June 1989 A consensus emerged at the workshop and is reflected in the book on the value of learning from nature in order to derive guidelines for the design of intelligent machines which operate in unstructured environments The papers in the book are grouped into seven chapters vision and dynamic systems hands and tactile perception locomotion intelligent motor control design technologies interfacing robots to nervous systems and robot societies and self organization **International Books in Print**, 1997 **The Cumulative Book Index**, 1997 A world list of books in the English language *Current Catalog* National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965 70 *Findings and Current Opinion in Cognitive Neuroscience* Larry R. Arbib, Peter R. Erdi, János Szentágothai, 1998 In *Neural Organization* Arbib Erdi and Szentágothai integrate structural functional and dynamical approaches to the interaction of brain models and neurobiological experiments Both structure based bottom up and function based top down models offer coherent concepts by which to evaluate the experimental data The goal of this book is to point out the advantages of a multidisciplinary multistrategied

approach to the brain Part I of Neural Organization provides a detailed introduction to each of the three areas of structure function and dynamics Structure refers to the anatomical aspects of the brain and the relations between different brain regions Function refers to skills and behaviors which are explained by means of functional schemas and biologically based neural networks Dynamics refers to the use of a mathematical framework to analyze the temporal change of neural activities and synaptic connectivities that underlie brain development and plasticity in terms of both detailed single cell models and large scale network models In part II the authors show how their systematic approach can be used to analyze specific parts of the nervous system the olfactory system hippocampus thalamus cerebral cortex cerebellum and basal ganglia as well as to integrate data from the study of brain regions functional models and the dynamics of neural networks In conclusion they offer a plan for the use of their methods in the development of cognitive neuroscience

Sensory-Motor Organizations and Development in Infancy and Early Childhood H. Bloch, B.I. Bertenthal, 2012-12-06 This book is the outcome of a Nato Workshop held in France in July 1989 The workshop was organized to examine current ideas about sensory motor organizations during human infancy and their development through early childhood The study of sensory motor development is experiencing a profound shift in scope focus methodology and theoretical foundations Many of these changes are quite new and not yet well covered in the literature We thought it would be useful for some of the leading researchers in this field to convene together and to compare notes and collectively to establish future directions for the field The reasons for a new conceptualization of sensory motor development are no doubt numerous but three are especially significant 1 One concerns a shift from studying either sensory or motor processing to investigation of the relations between the two 2 The second is connected to the new emphasis on action and its implications for goal directed and intentional behaviour extending over time 3 Lastly new theories and methodologies provide access to new tools for studying and conceptualizing the developmental process

1 One of the most enduring legacies of the behaviorist perspective has been a focus on the stimulus and the response to the exclusion of the relation between them Pick 1989 Historically this bias translated into a research agenda in which the investigator was concerned with either perceptual or motor competence but rarely the relation between them
