For investment professionals seeking to maximize this exciting new technology, this handbook is the definitive information source. *Handbook of Computational and Numerical Methods in Finance* Svetlozar T. Rachev, 2011-06-28. Numerical methods in finance have recently emerged as a new discipline at the intersection of probability theory, finance, and numerical analysis. They bridge the gap between financial theory and computational practice and provide solutions to problems where analytical methods are often non-applicable. Numerical methods are more and more used in several topics of financial analysis: computation of complex derivatives, market credit and operational risk assessment, asset liability management, optimal portfolio theory, financial econometrics, and others. Although numerical methods in finance have been studied intensively in recent years, many theoretical and practical financial aspects have yet to be explored. This volume presents current research focusing on various numerical methods in finance. The contributions cover methodological issues: Genetic Algorithms, Neural Networks, Monte Carlo methods, Finite Difference Methods, Stochastic Portfolio Optimization, as well as the application of other numerical methods in finance and risk management. As editor, I am grateful to the contributors for their fruitful collaboration. I would particularly like to thank Stefan Trueck and Carlo Marinelli for the excellent editorial assistance received over the progress of this project. Thomas Plum did a splendid word processing job in preparing the manuscript. I owe much to George Anastassiou, Consultant Editor, Birkhauser, and Ann Kostant, Executive Editor, Mathematics and Physics, Birkhauser, for their help and encouragement. *Artificial Neural Networks in Finance and Manufacturing* Joarder Kamruzzaman, Rezaul Begg, Ruhul A. Sarker, 2006. This book presents a variety of practical applications of neural networks in two important domains of economic activity: finance and manufacturing. Provided by publisher.
