Hypnosis in the Management of Sleep Disorders William C. Kohler,Peter J. Kurz,2017-07-06 Hypnosis in the Management of Sleep Disorders combines history and medical science to show that the use of hypnosis and hypnotic techniques is effective in the treatment of sleep disorders and that this is increasingly validated through modern tools computers fMRI images Dr Kohler and Kurz show readers that hypnosis and hypnotic techniques are not to be feared or avoided but that their use can contribute to effective non intrusive and cost effective approaches to the treatment of sleep problems This volume is a much needed reference for therapists and their patients alike on how hypnosis can be helpful in the treatment of certain sleep disorders The publisher **Philosophical Foundations for a Christian Worldview** J. P. Moreland,William Lane Craig,2017-10-10 This comprehensive and award winning orientation to Christian philosophical foundations is now updated and expanded in a second edition including enhanced arguments updated bibliographies and new chapters on atonement and the mind body problem This textbook from Moreland and Craig two leaders in the field is the keystone in any library of Christian philosophy **Analytic Philosophy of Religion** James Franklin Harris,2013-03-14 When Gene Long editor of Kluwer s Handbook of Contemporary Philosophy of Religion Series first invited me to write the volume on Analytic Philosophy of Religion I accepted with great enthusiasm My only explanation for that enthusiasm now is that I was younger and more naive at the time Soon after starting work on the volume my enthusiasm was dampened by the daunting magnitude of the task I began as a sprinter and quickly settled into the pace of a long distance runner Although I considered myself well read in the subject I soon discovered that I had a great deal of research to do to be confident that I had considered all of the major contributions to the various discussions issues and of religion As I read more and more problems found within analytic philosophy books and articles I realized that I had rushed into a territory already well trodden by the angels I am greatly impressed by the sophistication and subtlety of philosophical argument that characterize the different debates in contemporary analytic philosophy of religion This volume covers a vast amount of material I have endeavored to provide the fairest possible reading of different authors and in cases where I include my own critical evaluations and develop my own positions I have endeavored to provide the strongest possible interpretations of the positions I criticize **Polymeric Biomaterials, Revised and Expanded** Severian Dumitriu,2001-11-29 Offering nearly 7000 references 3900 more than the first edition Polymeric Biomaterials Second Edition is an up to the minute source for plastics and biomedical engineers polymer scientists biochemists molecular biologists macromolecular chemists pharmacists

Model Systems of Development and Aging of the Nervous System Antonia Vernadakis, Alain M. Privat, Jean M. Lauder, Paola S. Timiras, 2012-12-06 The last decade has generated a multitude of studies using in vitro model systems to explore growth and differentiation of the nervous system Although the findings have been exciting and have revealed unique properties of neural cells considerable concern continues to be expressed regarding the significance of in vitro findings in terms of their applicability to in vivo biological events To examine this issue further a group of scientists presented and discussed their findings at a conference sponsored by the Institute of Developmental Neuroscience and Aging held in Crete Greece 26-29 May 1985 The conference was cosponsored by the University of Crete and was generously supported by the Ministry of Research and Technology of Greece Tourism Organization of Greece and also Sandoz and FIDIA The Directors of the Institute of Developmental Neuroscience and Aging are indebted to these Institutions for their support For the success of this conference the Directors owe much to Drs Eleni Fleischer Lambropoulos and Yiannis Tsouderos who spent countless hours in making arrangements so that the participants would have not only a scientific but also a unique cultural experience Several chapters of this book focus on the complex phenomena of neurogenesis and gliogenesis and the modulation of neuronal differentiation The concept that neuronal differentiation has both genetic and epigenetic components is documented by elegant studies using both in vitro cultured cells and neurons transplanted in vivo

Mapping Human Sensory-Motor Skills for Manipulation onto the Design and Control of Robots Matteo Bianchi, Gionata Salvietti, 2019-03-25 Humans are endowed with extraordinary sensory motor capabilities that enable a successful interaction with and exploration of the environment as is the case of human manipulation Understanding and modeling these capabilities represents an important topic not only for neuroscience but also for robotics in a mutual inspiration both to inform the design and control of artificial systems and at the same time to increase knowledge on the biological side Within this context synergies i.e. goal directed actions that constrain multi DOFs of the human body and can be defined at the kinematic muscular neural level have gained increasing attention as a general simplified approach to shape the development of simple and effective artificial devices The execution of such purposeful sensory motor primitives on the biological side leverages on the interplay of the sensory motor control at central and peripheral level and the interaction of the human body with the external world This interaction is particularly important considering the new concept of robotic soft manipulation i.e. soft adaptable yet robust robotic hands that can deform with the external environment to multiply their grasping and manipulation capabilities Under this regard a preeminent role is reserved to touch being that skin is our primary organ to shape our knowledge of the external world and hence to modify it in interaction with the efferent parts This

Research Topic reports results on the mutual inspiration between neuroscience and robotics and on how it is possible to translate neuroscientific findings on human manipulation into engineering guidelines for simplified systems able to take full advantage from the interaction and hence exploitation of environmental constraints for task accomplishment and knowledge acquisition

Addressing Loneliness Ami Sha'ked, Ami Rokach, 2015-06-26 This is a volume on loneliness and what can be done to address its pain. While most books simply describe loneliness from one author's point of view, this volume includes a comprehensive review of the literature and employs top researchers in the field to discuss their own research findings, conclusions, and clinical experience. It explores the relationship between loneliness and sexuality, loneliness and optimism, and parental loneliness during pregnancy and childbirth. It also addresses loneliness throughout the life cycle in children, adolescents, the elderly, and the disabled, leading to a variety of coping and therapeutic modalities aimed at helping those who suffer from loneliness in its various forms.

Neuroplastic changes in addiction Ildikó Rácz, 2014-05-05 Addiction is a chronic relapsing disorder which comprises impulsive and compulsive elements. Chronic drug consumption leads to long-term neuroadaptive changes in the brain, thus resulting in an addictive state. However, development of addiction is a complex

interaction between genetic epigenetic and environmental factors The resulting cellular and molecular changes mediate the transition from controlled drug use to the loss of control over drug taking and drug seeking The human association studies helped us to identify some important genetic factors responsible for the susceptibility to addiction However social environmental circumstances highly influence the development of addiction Using animal models helps us to examine the underlying neuronal molecular processes under standardised conditions The aim of this Research Topic is to summarize our knowledge about the neuroplastic changes which contribute to the maintenance of drug taking Data presented in this Research Topic should also provide evidences how acute and long term neuronal changes during withdrawal result in relapse How different neuromodulators like endocannabinoids and endogenous opioids contribute to molecular mechanisms that mediate the transition from the controlled occasional drug consumption to the uncontrolled escalating drug use and seeking

Pediatric Oncology 1 G. Bennett Humphrey, Louis P. Dehner, Gerald B. Grindey, Ronald T. Acton, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good indepth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the Specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more

Neurosteroids Hubert Vaudry, Kazuyoshi Tsutsui, Thirty years ago the group of Baulieu and colleagues discovered that certain steroid hormones were present in higher amounts in the brain than in the plasma and also found that suppression of circulating steroids by adrenalectomy and castration did not affect the concentration of pregnenolone dehydroepiandrosterone and their sulfate esters in the rat brain These seminal observations led to the concept that the brain in very much the same way as the adrenal cortex testis ovary and placenta was capable of synthesizing steroids These brain born steroids called neurosteroids have been found to exert a vast array of biological activities A number of steroidogenic enzymes have now been identified in the central nervous system by immunohistochemistry and in situ hybridization and the neuronal and hormonal mechanisms regulating the biosynthesis of neurosteroids have been partially elucidated The aim of

this Research Topic is to celebrate three decades of research on neurosteroids by gathering a bouquet of review papers and original articles from leading scientists in the flourishing field of neurosteroids **The Human Brain** John Nolte, 1993 The Human Brain is a single authored core introductory neuroscience text that describes the structure and function of the brain and nervous system The text covers the neuroanatomy that students need with inclusion of clinical content providing real life application to clinical neurologic disorders Its readability and enhanced full color illustrations make it a favorite among both students and faculty
