Kartalopoulos,2009-03-11 2009 CHOICE AWARD OUTSTANDING ACADEMIC TITLE Information and communications security is a hot topic in private industry as well as in government agencies This book provides a complete conceptual treatment of securing information and transporting it over a secure network in a manner that does not require a strong mathematical background It stresses why information security is important what is being done about it how it applies to networks and an overview of its key issues It is written for anyone who needs to understand these important topics at a conceptual rather than a technical level Securing the Digital Frontier Andrew Martin,2025-04-01 Cyber space is easily the most complex thing humans have ever created With billions of people and devices all connected together vulnerability and compromise are inevitable The complexity continues to grow and with it comes the emergent insecurity brought by an

ever developing frontier where digital devices and connected people meet Security challenges present themselves increasingly often and with ever greater impacts This is not going to change anytime soon Although the internet has transformed communication business and social life for the better the construct of cyber space is incredibly fragile and presents endless risk Connecting every corner of our lives to those of billions across the world the frontier is slender between the good and the bad benefit and catastrophe real and fake security and insecurity Cyber security advice can be confusing contradictory and sometimes utterly detached from reality Too easily people feel guilty for not knowing what to do or failing to live up to expectations People particularly business leaders and policy makers must daily make security sensitive decisions sometimes unknowingly without being security experts Securing the Digital Frontier doesn't offer easy answers but instead explains sixteen dimensions of this dynamic problem and its current partial solutions The strong technology of encryption has become commonplace and is a huge benefit if deployed well but how can you tell Programming errors give rise to security problems but why can we not eliminate them Privacy is tied up with security but can the two work against each other Cyber space is international how can domestic laws protect us And what happens when those laws come into conflict with technologies like encryption Why do you need a punctuation symbol and a capital letter in your password anyway Through a grasp of the big picture through technical and human perspectives we can begin to explore ways to unwind some of the complexity and find ways to contain the risk
