Exploration of semiconductor product Andrew. J, 2024-05-15 The semiconductor market refers to the industry involved in the design development manufacturing and distribution of semiconductors which are the building blocks of electronic devices Semiconductors are materials with electrical conductivity between that of conductors such as metals and insulators such as plastics They are primarily made of silicon although other materials like gallium arsenide germanium and indium phosphide are also used The semiconductor market has experienced significant growth over the years due to the increasing demand for electronic devices and advancements in technology The market is driven by various factors such as the growing demand of smartphones and mobile devices the expansion of the automotive industry the rise of Internet of Things IoT devices and the development of emerging technologies like artificial intelligence AI virtual reality VR and autonomous vehicles etc To sum up the semiconductor market is a dynamic and rapidly evolving industry that plays a critical role in shaping the modern technological landscape Its growth is driven by advancements in various sectors and it continues to be a key enabler of innovation and technological progress The range of individual technological elements necessary for the semiconductor industry is extensive leading to the publication of numerous technical books across various domains while it is understandable that advanced technologies specific to each company are not publicly disclosed due to concerns regarding potential leaks These publications have

undeniably played a significant role in aiding professionals and students for establishing a solid foundation of knowledge. In addition to the importance of individual technologies, it is necessary to examine what final products emerge as these technologies converge. While consumer electronics such as PCs and smartphones vary, there are common aspects among the semiconductor products that constitute them. Should one seek more comprehensive materials, it often entails a costly purchase of white paper. In this book, we aim to delve into a more in-depth discussion of the semiconductor market with an emphasis on the product perspective. To accomplish this, we will extensively draw upon various academic and market resources. Additionally, in order to foster a comprehensive understanding of the market, it is necessary to have a certain level of familiarity with technical elements. Therefore, some technical explanations alongside the discussions are provided. In this book, we primarily focus on the FAB (Fabrication) domain. This book is divided into three major parts. Part 1 provides an overview of the semiconductor market, covering the definition, significance, supply chain structure, regional characteristics, challenges, and more within the semiconductor industry. Part 2, the major portion of this book, offers a comprehensive explanation of the most widely used types of semiconductor products. Particularly high market share products, notably Microcomponents, APs, and memory semiconductors, will have separate in-depth descriptions provided in the appendix. Finally, Part 3 will outline the general process by which these products are designed, focusing on a typical perspective up to the stage just before Foundry.
