Constraint-Based Scheduling Philippe Baptiste, Claude Le Pape, Wim Nuijten, 2012-12-06 Constraint Programming is a problem solving paradigm that establishes a clear distinction between two pivotal aspects of a problem 1 a precise definition of the constraints that define the problem to be solved and 2 the algorithms and heuristics enabling the selection of decisions to solve the problem It is because of these capabilities that Constraint Programming is increasingly being employed as a problem solving tool to solve scheduling problems Hence the development of Constraint Based Scheduling as a field of study The aim of this book is to provide an overview of the most widely used Constraint Based Scheduling techniques Following the principles of Constraint Programming the book consists of three distinct parts The first chapter introduces the basic principles of Constraint Programming and provides a model of the constraints that are the most often encountered in scheduling problems Chapters 2 3 4 and 5 are focused on the propagation of resource constraints which usually are responsible for the hardness of the scheduling problem Chapters 6 7 and 8 are dedicated to the resolution of several scheduling problems These examples illustrate the use and the practical efficiency of the constraint propagation methods of the previous chapters They also show that besides constraint propagation the exploration of the search space must be carefully designed taking into account

specific properties of the considered problem e.g dominance relations symmetries possible use of decomposition rules

Chapter 9 mentions various extensions of the model and presents promising research directions **Introduction to Global**
