*Wireless Multi-Access Environments and Quality of Service Provisioning: Solutions and Application* Muntean, Gabriel-Miro, Trestian, Ramona, 2012-01-31 This book serves as a vital resource for practitioners to learn about the latest research and methodology within the field of wireless technology covering important aspects of emerging technologies in the heterogeneous next generation network environment with a focus on wireless communications and their quality. Provided by publisher **Computerworld**, 1993-08-02 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site Computerworld.com twice monthly publication focused conference series and custom research form the hub of the world's largest global IT media network. **Network World**, 1991-03-25 For more than 20 years Network World has been the premier provider of information intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing implementing and managing the voice data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce.

**Emerging Secure Networks, Blockchains and Smart Contract Technologies** Jong-Moon Chung, 2024-09-16 This book equips readers with the essential knowledge to innovate and improve network performance while ensuring security and safety. It covers foundational TCP/IP Internet network technologies and significant cyber attack case studies. Additionally, it explains the core technologies behind Bitcoin, Ethereum, blockchains, smart contracts, hash functions, and encryption. The book also explores advanced concepts such as reinforcement learning, generative AI, federated learning, and digital twin technologies, offering new approaches to enhancing network security and blockchains through these cutting-edge methods.

**Software Defined Internet of Everything** Gagangeet Singh Aujla, Sahil Garg, Kuljeet Kaur, Biplab Sikdar, 2022-01-13 This book provides comprehensive discussion on key topics related to the usage and deployment of software defined networks, SDN in Internet of Everything applications like healthcare systems, data centers, edge fog computing, vehicular networks, intelligent transportation systems, smart grids, smart cities, and more. The authors provide diverse solutions to overcome challenges of conventional network binding in various Internet of Everything applications where there is need of an adaptive, agile, and flexible network backbone. The book showcases different deployment models, algorithms, and implementations related to the usage of SDN in Internet of Everything applications along with the pros and cons of the same. Even more, this book provides deep insights into the architecture of software defined networking, specifically about the layered architecture and different network planes, logical interfaces, and programmable operations. The need of network virtualization and the deployment models for network function virtualization is also included with an aim towards the design of interoperable network architectures by researchers in future. Uniquely, the authors find hands-on practical implementation, deployment scenarios, and use cases for various software defined networking architectures in Internet of Everything.

applications like healthcare networks Internet of Things intelligent transportation systems smart grid underwater acoustic networks and many more In the end design and research challenges open issues and future research directions are provided in this book for a wide range of readers
