Responsible Product Innovation Andy Yunlong Zhu, Max von Zedtwitz, Dimitris G. Assimakopoulos, 2017-11-09 This book analyses the relationships among product safety strategy and culture concurrent engineering new product development NPD processes and product safety performance Product safety is a matter of enormous economic and societal concern given the safety risks to consumers and the financial risks to producers Nevertheless a thorough conceptual understanding of the effects of NPD policies and practices is still largely missing as several large scale trends have made clarifying the role of product safety in its socio economic context difficult including the rise of consumerism and the shift in the balance of power from manufacturers to customers and regulators the internationalization of value chains and the fragmentation of markets worldwide and technological change leading to a sophistication of products that rendered average consumers increasingly unaware of risk and potential accidents This volume sets out to close the gaps among research practice and policy with an emphasis on advocating responsible product innovation Through an in depth study of the durable juvenile products industry the authors discover important relationships for example that top management involvement safety first culture and robust NPD processes are paramount in increasing product safety and decreasing product recalls in firms On the other end of the spectrum concurrent engineering does not automatically lead to product safety they found no magic bullet through which product safety can be tied to the use of a particular tool skill or practice Offering a dynamic framework for aligning the interests of multiple stakeholders including manufacturers regulators and consumers the authors provide a clearer understanding of product safety and its implications for scholars students policy makers and practitioners in the areas of innovation management product management R D management and responsible research and innovation
