Patrick M. Jenlink,2022-04-01 Today the meaning of literacy what it means to be literate has shifted dramatically Literacy involves more than a set of conventions to be learned either through print or technological formats Rather literacy enables people to negotiate meaning The past decade has witnessed increased attention on multiple literacies and modalities of learning associated with teacher preparation and practice Research recognizes both the increasing cultural and linguistic diversity in the new globalized society and the new variety of text forms from multiple communicative technologies There is also the need for new skills to operate successfully in the changing literate and increasingly diversified social environment Linguists anthropologists educators and social theorists no longer believe that literacy can be defined as a concrete list of skills that people merely manipulate and use Rather they argue that becoming literate is about what people do with literacy the values people place on various acts and their associated ideologies In other words literacy is more than linguistic it is political and social practice that limits or creates possibilities for who people become as literate beings Such understandings of literacy have informed and continue to inform our work with teachers who take a sociological or critical perspective toward literacy instruction Importantly as research indicates the disciplines pose specialized and unique literacy demands Disciplinary literacy refers to the idea that we should teach the specialized ways of reading understanding and thinking used in each academic discipline such as science mathematics engineering history or literature Each field has its own ways of using text to create and communicate meaning Accordingly as children advance through school literacy instruction should

shift from general literacy strategies to the more specific or specialized ones from each discipline Teacher preparation programs emphasizing different disciplinary literacies acknowledge that old approaches to literacy are no longer sufficient Literacy in Teacher Preparation and Practice Enabling Individuals to Negotiate Meaning introduces the reader to a collection of thoughtful research based works by authors that represent current thinking about literacy across disciplines and the preparation of teachers to enter classrooms Each chapter focuses on teaching guided by literacies across disciplines and the preparation of teachers who will enter classrooms to instruct the next generation of students **Haschek and Rousseaux's**

Smart Learning with Educational Robotics Linda Daniela, 2019-06-28. This book will offer ideas on how robots can be used as teachers' assistants to scaffold learning outcomes where the robot is a learning agent in self directed learning who can contribute to the development of key competences for today's world through targeted learning such as engineering thinking, math, physics, computational thinking etc. starting from pre school and continuing to a higher education level. Robotization is speeding up at the moment in a variety of dimensions both through the automation of work by performing intellectual duties and by providing support for people in everyday situations. There is increasing political attention especially in Europe on educational systems not being able to keep up with such emerging technologies and efforts to rectify this. This edited volume responds to this attention and seeks to explore which pedagogical and educational concepts should be included in the learning process so that the use of robots is meaningful from the point of view of knowledge construction and so that it is safe from the technological and cybersecurity perspective.

Rodríguez-López, 2024-09-02 Plant secondary metabolites are a diverse group of compounds that contribute to many important biological and ecological functions They are synthesized by plants to interact with the biotic and abiotic environments playing roles in plant defense growth and development Additionally plant secondary metabolites have widespread applications in human industries including food additives cosmetics dyes insecticides and drugs The biosynthesis of these compounds is complex and dynamic with more than one million secondary metabolites identified from terrestrial and aquatic plants Despite their diversity plants produce limited quantities of secondary metabolites in a metabolic cost saving way This has greatly limited their commercial production and the overexploitation of source plants has raised concerns about their sustainability and highlighted the need for advanced

research Recent advances in genomics transcriptomics metabolomics and other omics technologies have revolutionized our understanding of plant biology enabling the discovery of new plant secondary metabolites and their biosynthetic pathways Functional genomics approaches such as genome wide association studies transcriptome analysis and gene editing have facilitated the identification and characterization of genes and enzymes involved in the biosynthesis of specific secondary metabolites Metabolic engineering and synthetic biology approaches have enabled the manipulation of plant secondary metabolism to improve the yield and quality of specific metabolites of interest or to produce them in heterologous cultures These advances have created new opportunities for the sustainable production and utilization of plant secondary metabolites
