Read the passage and answer the questions.

Science experiments are a way to learn about the world around us. They are a way to test a hypothesis or to discover something new. There are many different types of science experiments, and they can be done in a classroom or at home.

One type of science experiment is a controlled experiment. In a controlled experiment, the scientist changes only one thing at a time and keeps everything else the same. This allows the scientist to see the effect of the one change.

Another type of science experiment is an observational experiment. In an observational experiment, the scientist simply watches what happens without changing anything. This allows the scientist to see what happens in the real world.

There are many different types of science experiments, and they can be done in a classroom or at home. Science experiments are a way to learn about the world around us.
