Decoding Generative AI Farabi Shayor,Kelina Lowther-Harris,Kirthana Srinivasan,Anoushka Samanta,2024-04-16 The emergence of Generative AI has marked a significant turning point heralding a new age of innovation and intellectual exploration Much like a compelling narrative this advancement in artificial intelligence has captivated the global community and ushered in an unprecedented surge of innovation For many years the subtle hum of AI has been interconnected into the fabric of our society Devices such as Echo Alexa and Google Home once considered avant garde are now seamlessly integrated into our homes and vehicles becoming essential navigators in our daily journeys However this new phase of AI evolution is distinct Capable of enhanced ability these new generative AI systems could easily discern the intuitive needs of their end users With a mere command or a simple image generative AI systems can draft comprehensive reports write legal documents or produce intricate visual masterpieces Their proficiency can also be extended to routine and mundane tasks smoothly managing administrative duties writing correspondences and providing invaluable support in professional settings Although these foundation models require a vast amount of training data and billions of parameters to be effective the outcomes are equally remarkable Technology companies and investors recognising the potential embarked on an investment spree steering a new era for the development of specialised models such as Microsoft CoPilot Midjourney ChatGPT and so on As these technology companies continue to improve their language models each version seems to be more refined than its predecessor Foremost among these are the Large Language Models LLMs emblematic of this AI renaissance Now with voice

activated capabilities generative AIs have become capable of much more in the relatively short span of their existence. With the integration of voice activated features combined with their capabilities to speak like a human being their potential continues to grow exponentially. They aren't labelled as chatbots anymore these AI systems signify a technological paradigm shift reshaping humanity's understanding of technology automation and creative expression. However with such shift comes the imperative need for governance and control. The unchecked expansion of AI poses unmitigated challenges. In reality these advanced AIs have the potential to be transformative and destructive parallelly. Thus it is necessary to establish guidelines and oversight to ensure the ethical deployment of such systems which this book focuses on. As society stands at this transformative crossroads parallels are being drawn to the imaginative world of fiction. The concept of Jarvis AI from the fictitious world appears provocatively close to becoming a reality. The epoch of generative AI has truly dawned promising a future where technological prowess and human aspiration unite.

The Double Black Box Ashley S. Deeks, 2025

National security decisions pose a paradox they are among the most consequential a government can make but are generally the least transparent to the democratic public The black box nature of national security decision making driven by extensive classification and characterized by difficulty overseeing executive actions has expanded in the United States as executive power continues to grow The rise of artificial intelligence AI systems to enhance national security decision making or even to make autonomous decisions deepens this challenge because it is difficult to understand how AI algorithms often described as black boxes reach their conclusions The widespread use of AI inside the national security ecosystem renders U S national security choices even more opaque to the public congressional overseers U S allies and even the executive officials making the decisions How can we be confident that the U S government s use of these AI systems comports with our values including rationality lawfulness and accountability The Double Black Box National Security Artificial Intelligence and the Struggle for Democratic Accountability addresses these pressing challenges Because China is committed to becoming the world leader in AI and faces fewer legal and values based constraints on its pursuit of military AI democracies commitment to using AI in
