Renfro,2019-12-15 Growing Up America brings together new scholarship that considers the role of children and teenagers in shaping American political life during the decades following the Second World War Growing Up America places young people and their representations at the center of key political trends illuminating the dynamic and complex roles played by youth in the midcentury rights revolutions in constructing and challenging cultural norms and in navigating the vicissitudes of American foreign policy and diplomatic relations The authors featured here reveal how young people have served as both political actors and subjects from the early Cold War through the late twentieth century Age of Fracture At the same time Growing Up America contends that the politics of childhood and youth extends far beyond organized activism and the ballot box By unveiling how science fairs breakfast nooks Boy Scout meetings home economics classrooms and correspondence functioned as political spaces this anthology encourages a reassessment of the scope and nature of modern politics itself The U.S. Technology Skills Gap Gary J. Beach,2013-07-10 Is a widening skills gap in science and math education threatening America s future That is the seminal question addressed in The U S Technology Skills Gap a comprehensive 104 year review of math and science education in America Some claim this skills gap is equivalent to a permanent national recession while others cite how the gap threatens America s future economic workforce employability and national security This much is sure America s math and science skills gap is or should be an issue of concern for every business and information technology executive in the United States and The U S Technology

Skills Gap is the how to get involved guidebook for those executives laying out in a compelling chronologic format The history of the science and math skills gap in America Explanation of why decades of astute warnings were ignored Inspiring examples of private company efforts to supplement public education A pragmatic 10 step action plan designed to solve the problem And a tantalizing theory of an obscure Japanese physicist that suggests America s days as the global scientific leader are numbered Engaging and indispensable The U S Technology Skills Gap is essential reading for those eager to see America remain a relevant global power in innovation and invention in the years ahead Hematopoiesis Leonard I. Zon,2001-04-12 Hematopoiesis or the process of blood formation has been extensively studied at both basic and clinical levels Human diseases such as thalassemia immunodeficiency and leukemia represent defects in this process Approaches to treat these disorders have required a basic understanding of the biology of blood cells For instance hemapoietic stem cell replacement or bone marrow transplantation has been used to ameliorate disease This volume focuses on hematopoiesis at a cellular and molecular level and establishes the basis for clinical manipulation of hematopoietic cells for therapeutic benefit In Part I the cellular characteristics of progenitors and stem cells are explored Emphasis is placed on purification of stem cells and both in vitro and in vivo assays The regulation of normal and leukemis stem cells is illustrated An excellent discussion of potential use of these cells for gene therapy concludes this section Hemapoiesis is easily studied during embryogenesis Part II develops the concept of the waves of hemapoiesis during development Comparative hematology is making a major comeback as a field in the 1990 s One hope is that general principles of hematopoiesis will be established by studying many models and systems Part III delves into critical factors that regulate hematopoiesis including both intracellular and extracellular signals Part IV and V describe lineage programs for myeloid and lymphoid lineages These chapters are meant to be illustrative of the different cell fates but are not exhaustive Part VI examines the genetics of hematopois is particularly in animal models The hematopoietic system is in constant contact with stromal cells and endothelial cells during development and in the adult Evidence suggests that endothelial cells and blood cells may arise from a common progenitor the hemangioblast Part VII and VIII discuss the stromal and endothelial cells with the emphasis on their interaction with hematopoietic cells Immune Profile after Autologous Hematopoietic Stem Cell Transplantation for Autoimmune Diseases: Where Do We Stand? Kelen Cristina Ribeiro Malmegrim,Maria Carolina Oliveira,Antoine Toubert,Dominique Farge-Bancel,2020-02-12 Autologous hematopoietic stem cell transplantation AHSCT was proposed 20 years ago as an alternative therapeutic approach for patients with severe and refractory autoimmune diseases Since then this innovative therapy has been successfully used to treat several autoimmune diseases such as neurological disorders Multiple Sclerosis connective tissue diseases Systemic Sclerosis and Systemic Lupus Erythematosus gastrointestinal inflammatory diseases Crohn s Disease and others Juvenile Arthritis Type 1 Diabetes Vasculitis Experience in phase I II and III clinical trials over the years has led to increased safety and efficacy of this procedure Recent studies have demonstrated superior therapeutic efficacy of AHSCT versus conventional

therapies showing that transplantation can induce long term disease remission in the absence of any further immunosuppressive treatment Immune monitoring studies have showed that AHSCT is able to reduce the inflammatory milieu to reset the immune balance and to promote the generation of a new auto tolerant immune repertoire However some patients fail to remain in remission and disease is re activated after some time post transplantation This scenario indicates that further immunological interventions may be still required to improve AHSCT efficacy Clear understanding of the operating immune mechanisms that contribute to specific clinical outcomes is vital to enable improvement of AHSCT protocols for autoimmune diseases The U.S. Department of Education's Gender Equity Expert Panel United States.

Clinical Applications of Cytokines and Growth Factors John R. Wingard, George D. Demetri, 1999-05-31 The hematopoietic system plays roles that are crucial for survival of the host delivery of oxygen to tissues arrest of accidental blood leaking from blood vessels and fending off of invading microbes by humoral cell mediated and phagocytic immunity The activity of the hematopoietic system is staggering daily a normal adult produces approximately 2.5 billion erythrocytes 2.5 billion platelets and 1 billion granulocytes per kilogram of body weight This production is adjusted in a timely fashion to changes in actual needs and can vary from nearly none to many times the normal rate depending on needs which vary from day to day or even minute to minute In response to a variety of stimuli the cellular components of the blood are promptly increased or decreased in production to maintain appropriate numbers to optimally protect the host from hypoxia infection and hemorrhage How does this all happen and happen without over or under responding There has been extraordinary growth in our understanding of hematopoiesis over the last two decades Occupying center stage is the pluripotent stem cell and its progeny Hematopoietic stem cells have been characterized by their capacity for self renewal and their ability to proliferate and differentiate along multiple lineages Few in number the stem cell gives rise to all circulating neutrophils
