Ethics and Experiments Scott Desposato, 2015-12-22 For most of political science's history discussions about professional ethics had nothing to do with human subjects Professional ethics involved integrity in the classroom fair tenure and promotion rule and the careful avoidance of plagiarism As most research was observational there was little need for attention to how scholarly activities might directly affect the subjects of our work Times have changed The dramatic growth in the use of experiments in social science especially overseas is generating unexpected ethical controversies The purpose of this volume is to identify debate and propose practical solutions to the most critical of these new ethical issues A leading team of internationally distinguished political science scholars presents the first examination of the practical and ethical challenges of research with human subjects in social science and policy studies Part 1 examines contextual challenges provided by experiments conducted overseas questions of culture religion security and poverty Part 2 examines questions of legal constraints on research focusing on questions of foreign review of international experiments Part 3 tackles the critical issues in field experiments including deception and consent impact on elections and careers the boundaries of the public officials exemption and the use of partner organizations to avoid Institutional Review Board IRB review Part 4 considers strategies for the future including training and education IRB reform institutional changes and norm development

Reviews Of Accelerator Science And Technology - Volume 9: Technology And Applications Of Advanced Accelerator Concepts Alexander Wu Chao,Weiren Chou,2017-02-20 Since its invention in the 1920s particle accelerators have made tremendous progress in accelerator science technology and applications However the fundamental acceleration principle namely to apply an external radiofrequency RF electric field to accelerate charged particles remains unchanged As this method either room temperature RF or superconducting RF is approaching its intrinsic limitation in acceleration gradient measured in MeV/m it becomes apparent that new methods with much higher acceleration gradient measured in GeV/m must be found for future very high energy accelerators as well as future compact table top or room size accelerators This volume introduces a number of advanced accelerator concepts AAC their principles technologies and potential applications For the time being none of them stands out as a definitive direction in which to go But these novel ideas are in hot pursuit and look promising Furthermore some AAC requires a high power laser system This has the implication of bringing two different communities accelerator and laser to join forces and work together It will have profound impact on the future of our field Also included are two special articles one on Particle Accelerators in China which gives a comprehensive overview of the rapidly growing accelerator community in China The other features the person of the issue who was well known nuclear physicist Jerome Lewis Duggan a pioneer and founder of a huge community of industrial and medical accelerators in the US

The Teaching of Science in Primary Schools Wynne Harlen OBE,Anne Qualter,2017-08-04 *The Teaching of Science in Primary Schools* provides essential information for all concerned with primary school education about all aspects of teaching science It pays particular attention to inquiry based teaching and learning because of the more general educational benefits that follow from using this approach These benefits are often expressed in terms of developing general scientific literacy and fostering the ability to learn and the motivation to continue learning This book also aims to

help teachers focus on the big or powerful ideas of science rather than teaching a series of unrelated facts This leads children to an understanding of the nature and limitations of scientific activity This fully expanded and updated edition explores The compelling reasons for starting science in the primary school Within school planning in the context of less prescriptive national requirements The value of having in mind the big ideas of science The opportunities for children to learn through greater access to the internet and social networking The expanding sources of materials and guidance now available to teachers on line Greater attention to school and teacher self evaluation as a means of improving provision for children s learning The importance for both teachers and learners of reflecting on the process and content of their activities Other key aspects of teaching such as questioning the importance of discussion and dialogue the formative and summative roles of assessment and strategies for helping children to develop understanding skills positive attitudes and enjoyment of science are preserved So also is the learner centred approach with an emphasis on children learning to take some responsibility for their activities This book is essential reading for all primary school teachers and those on primary education courses

Energy and Water Development Appropriations for 2013 United States. Congress. House. Committee on Appropriations. Subcommittee on Energy and Water Development, 2012

Reviews of Accelerator Science and Technology - Volume 3 Alex Chao, 2010 Each generation yielded growths in brightness and time resolution that were unimaginable just a few years earlier In particular the progression from the 3rd to 4th generation is a true revolution the peak brilliance of coherent soft and hard x rays has increased by 7 10 orders of magnitude and the image resolution has reached the angstrom 1 symbol 10⁻¹⁰ meters and femto second 1 fs 10⁻¹⁵ second scales These impressive capabilities have fostered fundamental scientific advances and led to an explosion of numerous possibilities in many important research areas including material science chemistry molecular biology and the life sciences Even more remarkably this field of photon source invention and development shows no signs of slowing down Studies have already been started on the next generation of x ray sources which would have a time resolution in the atto second 1 as 10⁻¹⁸ second regime comparable to the time of electron motion inside atoms

Reviews Of Accelerator Science And Technology - Volume 3: Accelerators As Photon Sources Alexander Wu Chao, Weiren Chou, 2011-01-20 Over the last half century we have witnessed tremendous progress in the production of high quality photons by electrons in accelerators This dramatic evolution has seen four generations of accelerators as photon sources The 1st generation used the electron storage rings built primarily for high energy physics experiments and the synchrotron radiation from the bending magnets was used parasitically The 2nd generation involved rings dedicated to synchrotron radiation applications with the radiation again from the bending magnets The 3rd generation currently the workhorse of these photon sources is dedicated advanced storage rings that employ not only bending magnets but also insertion devices wigglers and undulators as the source of the radiation The 4th generation which is now entering operation is photon sources based on the free electron laser FEL an invention made in the early 1970s Each generation

yielded growths in brightness and time resolution that were unimaginable just a few years earlier. In particular, the progression from the 3rd to 4th generation is a true revolution: the peak brilliance of coherent soft and hard x-rays has increased by 7 to 10 orders of magnitude and the image resolution has reached the angstrom (1 to 10 meters and femto second 1 fs to 15 second scales). These impressive capabilities have fostered fundamental scientific advances and led to an explosion of numerous possibilities in many important research areas including material science, chemistry, molecular biology, and the life sciences. Even more remarkably, this field of photon source invention and development shows no signs of slowing down. Studies have already been started on the next generation of x-ray sources which would have a time resolution in the atto second (1 as to 18 second regime) comparable to the time of electron motion inside atoms. It can be fully expected that these photon sources will stand out among the most powerful future science research tools. The physics community as well as the entire scientific community will hear of many pioneering and groundbreaking research results using these sources in the coming years. This volume contains fifteen articles all written by leading scientists in their respective fields. It is aimed at the designers, builders, and users of accelerator-based photon sources as well as general audience who are interested in this topic.
