

These authors also note that the use of the term "cognitive" is problematic because it is often used to refer to a wide range of mental processes, from simple perception to complex reasoning. They argue that the term "cognitive" is too broad and should be replaced by more specific terms, such as "perception," "attention," "memory," and "reasoning." They also note that the term "cognitive" is often used to refer to a specific set of mental processes, such as those involved in problem-solving and decision-making. They argue that this is also problematic because it is often unclear what specific mental processes are being referred to.
