Oncology Marco Durante, Francis A. Cucinotta, Jay S. Loeffler, 2018-01-31 High energy charged particles represent a cutting edge technique in radiation oncology Protons and carbon ions are used in several centers all over the world for the treatment of different solid tumors Typical indications are ocular malignancies tumors of the base of the skull hepatocellular carcinomas and various sarcomas The physical characteristics of the charged particles Bragg peak allow sparing of much more normal tissues than it is possible using conventional X rays and for this reason all pediatric tumors are considered eligible for protontherapy Ions heavier than protons also display special radiobiological characteristics which make them effective against radioresistant and hypoxic tumors On the other hand protons and ions with high charge Z and energy HZE particles represent a major risk for human space exploration The main late effect of radiation exposure is cancer induction and at the moment the dose limits for astronauts are based on cancer mortality risk The Mars Science Laboratory MSL measured the dose on the route to Mars and on the planet s surface suggesting that a human exploration missions will exceed the radiation risk limits Notwithstanding many studies on carcinogenesis induced by protons and heavy ions the risk uncertainty remains very high In this research topic we aim at gathering the experiences and opinions of scientists dealing with high energy charged particles either for cancer treatment or for space radiation protection Clinical results with protons and heavy ions as well as research in medical physics and pre clinical radiobiology are reported In addition ground based and spaceflight studies on the effects of space radiation are included in this book Particularly relevant for space studies are the clinical results on normal tissue complications and second cancers The eBook nicely demonstrates that particle therapy in

oncology and protection of astronauts from space radiation share many common topics and can learn from each other

one hand data models are designed for use by computer software components and are consequently constrained by the mechanistic demands of software environments data modeling strategies must accept the formal rigors imposed by unambiguous data sharing and query evaluation logic In particular data models are not well suited for software level deployment if such models do not translate seamlessly to clear strategies for querying data and ensuring data integrity as information is moved across multiple points On the other hand data modeling is likewise constrained by human conceptual tendencies because the information which is managed by databases and data networks is ultimately intended to be visualized utilized by humans as the end user Thus at the intersection of both formal and humanistic methodology data modeling takes on elements of both logico mathematical frameworks e g type systems and graph theory and conceptual philosophical paradigms e g linguistics and cognitive science The authors embrace this two sided aspect of data models by seeking non reductionistic points of convergence between formal and humanistic conceptual viewpoints and by leveraging biomedical contexts viz COVID Cancer and Cardiac Care so as to provide motivating examples and case studies in this volume Provides an analysis of how conceptual spaces and related cognitive linguistic approaches can inspire programming and query processing models Outlines the vital role that data modeling curation has played in significant medical breakthroughs Presents readers with an overview of how information management approaches intersect with precision medicine providing case studies of data modeling in concrete scientific practice Explores applications of image analysis and computer vision in the context of precision medicine Examines the role of technology in scientific publishing replication studies and dataset curation
