Cost Engineering for Pollution Prevention and Control Paul Mac Berthouex, Linfield C. Brown, 2021-05-13 Environmental engineers work to increase the level of health and happiness in the world by designing building and operating processes and systems for water treatment water pollution control air pollution control and solid waste management These projects compete for resources with projects in medicine transportation education and other fields that have a similar objective The challenge is to make the investments efficient to get the best project outputs with a minimum of inputs Cost Engineering for

Pollution Prevention and Control examines how to identify the best solution by judging alternatives with respect to some measure of system performance such as total capital cost annual cost annual net profit return on investment cost benefit ratio net present worth minimum production time maximum production rate minimum energy utilization and so on Key Features Explains how to estimate preliminary costs how to compare the life cycle costs of alternative projects how to find the optimal balance between capital costs and operating costs Emphasis is placed on formulating the problem rather than on the mathematical details of how the calculations are done Provides numerous practical examples and case studies Includes end of chapter exercises dealing with water wastewater air pollution solid wastes and remediation projects The important concepts presented in this book can be understood by those students who have taken an introductory course in environmental engineering Advanced knowledge of process design is not required The material can also be utilized by engineers managers and others who would benefit from a better understanding of how engineers look at problems **The Chemical News and Journal of Industrial Science** William Crookes, James H.
