Lepschy, 2014-09-19 This comprehensive history

of linguistics is part of a 5 volume set Together the volumes examine the social cultural and religious functions of language its place in education the prestige attached to different varieties of language and the presentation of lexical and grammatical descriptions They explore the linguistic interests and assumptions of individual cultures in their own terms without trying to transpose and reshape them into the context of contemporary ideas of what the scientific study of language ought to be The authors of individual chapters are all specialists who have been able to analyse the primary sources and so produce original syntheses which offer an authoritative view of the different traditions and periods Volume Two examines the Greek Roman and Medieval European traditions which between them developed the grammatical and syntactical models which form the basis of our inherited linguistic assumptions

Plant DNA Infectious Agents Thomas Hohn,Josef Schell,2012-12-06 There has been recent rapid progress in the transformation of plants with foreign DNA making use either of the natural routes of genetic invasion that viruses and bacteria have developed or of chemical mechanical and electrical tricks to make plant protoplast membranes permeable to nucleic acids Genes integrated into plant virus genomes can be carried systemically from the initial site of infection into the rest of the plant Genes placed between the borders of *Agrobacterium tumefaciens* T DNA can be transferred into single cells or plant tissue which then divides to produce wound calli or as in the case of an *Agrobacterium rhizogenes* infection grow out into new roots Calli and roots can be grown into whole plants If virus genomes are placed between the T DNA borders a very effective infectious route termed agroinfection is established Once inside a protoplast DNA finds its way into the nucleus where it can finally integrate into the resident chromosome and be expressed Whether it can also find its way into chloroplasts is not yet clear but at least translation products can be targeted into this organelle Regeneration of whole organisms from single cells is a special feature of plants and offers a unique tool to study genes in a multicellular organism In addition as in animal cells transcription and translation of transforming genes can be studied in plant cells during transient expression
