Humans Claudio Tuniz,Patrizia Tiberi Vipraio,2016-05-24 Based on the latest scientific discoveries this unauthorized biography of the Humans recounts the story of our distant ancestors during the past 6 million years since the line of our extended family separated from that leading to modern chimpanzees The book explains how different species evolved both anatomically and cognitively and describes the impacts of climatic and environmental change on this process It also explores the nature of relationships within and between species describes their everyday lives and discusses how isolated individuals became members of larger social groups The concluding chapters highlight the paramount importance of the emergence of symbolic thought and discuss its contribution to the formation of institutions societies and economies The multifaceted picture that emerges will help the reader to make sense not only of what we were but also of

what we are here and now The book is both entertaining and rigorous in integrating results from a wide selection of disciplines It will be particularly suitable for people with a curious and open mind keen to overcome long standing prejudices on man s place in nature *Origins of the Universe, Life and Species* Plammoottil Cherian,2018-03-22 The relationship between science and theology has been a crisis for humanity since Darwin s publication of *Origin of Species* that affects the very core of scientific and Biblical truths with serious consequences In this detailed and absorbing book Dr Cherian provides astounding facts of science that were deciphered in the last 500 years each of which is recorded in the Biblical Scriptures Heeding back to the Biblical account of creation Dr Cherian takes the readers from the erroneous notion of the origin of the universe without a cause and abiogenesis as the source of life to the latest scientific discoveries that corroborate the Biblical evidence for divine creation of the universe life and species that dispel Darwinian evolution The *Origins of the Universe Life and Species* sheds much light for a better understanding of the Scriptures that were hidden to many scientists researchers and students to relate the scientific discoveries that reveal the Biblical truths for a better appreciation of the unknown God who reveals himself through the many scientists and their discoveries Dr Cherian uses all branches of science from astronomy to zoology connecting the dots between science and theology that stretches from the highest of heavens outer space to the deepest of ocean floor revealing the unknown God to be the KNOWN GOD **Maps of Time** David Christian,2011-09 Introducing a novel perspective on the study of history David Christian views the interaction of the natural world with the more recent arrivals in flora fauna including human beings **The Earth, Humanity and God** Colin A. Russell,2019-10-16 Originally published in 1994 *The Earth Humanity and God* discusses the relationship between science and religion The book discusses the condition of the earth as it was at the time of publication and the future prospects of the planet arguing that neither the conventional mechanistic view nor New Age philosophy helps alone in evaluating our relationship with the Earth The book examines methods of combatting the threats to the Earth exploring both a scientific and non scientific stance investigating the uncontrolled expansion of technology as well as empirical pre scientific mysticism The book also explores the resurgence in ancient ideas of Mother Earth as a dangerous piece of romantic irrationality and suggests that these views pose a danger to religious scientific examinations The book suggests instead a hard headed attempt to relate Biblical and scientific data and that this in turn can yield a valuable new understanding of the problems facing the world **The Origin of Humanity and Evolution** Andrew Ter Ern Loke,2022-06-16 Addressing the intense debate in science and religion in light of evolutionary population genetics Andrew Ter Ern Loke argues that the theory of evolution as understood by mainstream scientists is compatible with Scripture Loke asserts that resolving this area of perceived conflict would greatly benefit both scientific and religious communities and contribute to the spiritual quest of humankind Whilst affirming that the Bible should be interpreted according to proper hermeneutical principles such as considering the literary genre literary context meaning of words grammatical relationship and the background and concerns

of the ancient authors this book also assesses the scientific data according to proper mainstream scientific methodology Having accomplished these tasks it proposes a model which argues that all humans today have Adam as common ancestor even though this ancestor is not our sole ancestor **Teaching Big History** Richard B. Simon,2014-12-23 Big History is a new field on a grand scale it tells the story of the universe over time through a diverse range of disciplines that spans cosmology physics chemistry astronomy geology evolutionary biology anthropology and archaeology thereby reconciling traditional human history with environmental geography and natural history Weaving the myriad threads of evidence based human knowledge into a master narrative that stretches from the beginning of the universe to the present the Big History framework helps students make sense of their studies in all disciplines by illuminating the structures that underlie the universe and the connections among them Teaching Big History is a powerful analytic and pedagogical resource and serves as a comprehensive guide for teaching Big History as well for sharing ideas about the subject and planning a curriculum around it Readers are also given helpful advice about the administrative and organizational challenges of instituting a general education program constructed around Big History The book includes teaching materials examples and detailed sample exercises This book is also an engaging first hand account of how a group of professors built an entire Big History general education curriculum for first year students demonstrating how this thoughtful integration of disciplines exemplifies liberal education at its best and illustrating how teaching and learning this incredible story can be transformative for professors and students alike **Cycles of Salvation History** Ulrich Utiger,2013-07-05 The first part of the present book casts a new light on the Genesis vs science issue the second part points out that salvation history is repeating itself through cycles of four typical phases and based on this the third part shows that Marian apparitions are predicted by Scriptures

The Public Family David Herring,2010-11-23 Those concerned with investigating the political functions of the family far too often identify only one the production of good democratic citizens As a result public discussion of family law and policy has been confined to a narrow continuum that ignores the family s other often subversive political functions In The Public Family David Herring s goal is to create a new rhetoric that moves beyond the stalemate that often results from the war between advocates of parental rights and those of children s rights This rhetoric of associational respect allows him to constructively address the role of rights and the limits of individualism in political and legal theory While acknowledging the family s importance in facilitating state functioning and power in a large pluralistic democracy the aforementioned production of good citizens Herring fully explores the ways in which the family produces diversity and promotes tolerance Unlike other works on the subject which view the differences between individuals as constituting the central challenge for American society Herring focuses on the importance of such differences In doing so he enriches and enlivens the often divisive public discussion of family law and policy **The Origins of Life and the Universe** Paul F. Lurquin,2003-04-16 The Origins of Life and the Universe is the culmination of a university science professor s search for understanding and is

based on his experiences teaching the fundamental issues of physics chemistry and biology in the classroom What is life Where did it come from How can understanding the origins of life on Earth help us understand the origins of the universe and vice versa These are questions that have occupied us all This is a book then about the beginning of things of the universe matter stars and planetary systems and finally of life itself topics of profound interest that are rarely considered together After surveying prescientific accounts of the origins of life the book examines the concepts of modern physics and cosmology in particular the two pillars of modern physics relativity and quantum theory and how they can be applied to the Big Bang model of the creation of the universe The author then considers molecular genetics and DNA the famed building block of life In addition to assessing various hypotheses concerning the appearance of the first bacterial cells and their evolution into more complex eukaryotic cells this section explains how protocells may have started a kind of integrated metabolism and how horizontal gene transfer may have speeded up evolution Finally the book discusses the possibility that life did not originate on planet Earth but first appeared on other solar planets or perhaps in other star systems How would such a possibility affect our understanding of the meaning of life or of its ultimate fate in the universe The book ends as it begins with profound questions and penetrating answers a state of the art guide to unlocking the scientific mysteries of life and matter

Mathematics and Information in the Philosophy of Michel Serres Vera Bühlmann, 2020-02-20 This book introduces the reader to Serres unique manner of doing philosophy that can be traced throughout his entire oeuvre namely as a novel manner of bearing witness It explores how Serres takes note of a range of epistemologically unsettling situations which he understands as arising from the short circuit of a proprietary notion of capital with a praxis of science that commits itself to a form of reasoning which privileges the most direct path simple method in order to expend minimal efforts while pursuing maximal efficiency In Serres universal economy value is considered as a function of rarity not as a stock of resources This book demonstrates how Michel Serres has developed an architectonics that is coefficient with nature *Mathematic and Information in the Philosophy of Michel Serres* acquaints the reader with Serres monist manner of addressing the universality and the power of knowledge that is at once also the anonymous and empty faculty of incandescent inventive thought The chapters of the book demarcate problematize and contextualize some of the epistemologically unsettling situations Serres addresses whilst also examining the particular manner in which he responds to and converses with these situations

The Twentieth Century Gregory Baum, 1999-01-01 An examination of the impact of major historical events of the 20th century on the interpretation theologians have given of the Christian message Events include the World Wars the Russian Revolution the Great Depression Nazism the Holocaust welfare capitalism and the free market economy There follow reflections from a contemporary perspective on important cultural and religious developments of the 20th century

Genetic Algorithms + Data Structures = Evolution Programs Zbigniew Michalewicz, 2013-03-09 Genetic algorithms are founded upon the principle of evolution i e survival of the fittest Hence evolution programming techniques based on genetic

algorithms are applicable to many hard optimization problems such as optimization of functions with linear and nonlinear constraints the traveling salesman problem and problems of scheduling partitioning and control The importance of these techniques is still growing since evolution programs are parallel in nature and parallelism is one of the most promising directions in computer science The book is self contained and the only prerequisite is basic undergraduate mathematics This third edition has been substantially revised and extended by three new chapters and by additional appendices containing working material to cover recent developments and a change in the perception of evolutionary computation

The Darwinian Delusion Michael Ebifegha, 2011-10-14 The postulate of molecules to human evolution by natural selection evolutionism like creationism cannot be demonstrated empirically Therefore the creationism evolutionism controversy offers a choice between intelligent design by God and unintelligent design by evolutionary selection Scientists are split on philosophical grounds since events in the immaterial realm are outside the purview of science In reality designers claim products no product of a process can account for how it was designed or for its ontology Accordingly Scientific American Editor John Rennie suggested that one way to override a purely evolutionary worldview is if the creator s appeared and claimed credit Author Michael Ebifegha s previous book *The Death of Evolution* provides the historical details of Gods ancient claim for creating the universe before an audience Dawkins in his *The God Delusion* failed to address this historical event hence his statement that There almost certainly is no God is flawed *The Darwinian Delusion* discusses the fossil record the role of natural selection the mystery of the origin of life and Gods affirmation of agency in world history Ebifegha argues that both the scientific and philosophical analysis point to God as the Creator and hence the delusion as such is not about God but about the Darwinian paradigm of materialism
