Origins Consciousness Understand Leading Reality:

The Origin of Consciousness Graham Little, *The Origins of Moral Theology in the United States* Charles E. Curran, 1997-02-01 Charles E Curran presents the first in depth analysis of the origins of Catholic moral theology in the United States focusing on three significant figures in the late nineteenth century and demonstrating that methodological pluralism and theological diversity existed in the Church even then Curran begins by tracing the historical development of moral theology especially as presented in nineteenth century manuals of moral theology which offered a legal model of morality including a heavy emphasis on canon law He then probes the different approaches and ideas of three important writers Aloysius Sabetti a Jesuit who was a typical as well as the most influential American manualist Thomas J Bouquillon first chair of moral theology at Catholic University of America a neoscholastic who criticized the manuals approach as narrow and incomplete for failing to address principles virtues and the connection to systematic theology and clerical educator John B Hogan a casuist who developed a more inductive and historically conscious methodology Curran describes how all three men dealt in different ways with the increasing role of authoritative teachings in moral theology from the Vatican He also shows how they reflected their American context and the views of their own time on women and sexuality So little attention has been paid to the development of moral theology in this country that these authors are unknown to many scholars Curran's book corrects this oversight and proposes that the ferment revealed in their writings offers important lessons for contemporary Catholic moral theology

Origins of Mind Liz Swan, 2012-12-22 The big question of how and why mindedness evolved necessitates collaborative multidisciplinary investigation Biosemiotics provides a new conceptual space that attracts a multitude of thinkers in the biological and cognitive sciences and the humanities who recognize continuity in the biosphere from the simplest to the most complex organisms and who are united in the project of trying to account for even language and human consciousness in this comprehensive picture of life The young interdisciplinary of biosemiotics has so far by and large focused on codes signs and sign processes in the microworld a fact that reflects the field's strong representation in microbiology and embryology What philosophers of mind and cognitive scientists can contribute to the growing interdisciplinary are insights into how the biosemiotic *weltanschauung* applies to complex organisms like humans where such signs and sign processes constitute human society and culture

Cosmos, Values, and Consciousness in Latin American Digital Culture

Angelica J. Huizar,2020-05-19 This book understands digital cultural production of electronic literatures and digital art by looking at electronic and digital works that produce subjective positionality clouded knowledges of quantum theories and metaphysical patterns grounded in a cultural ideology This book underlines a conceptual framework for understanding how digital media impacts reading approaching and even interpreting social reality The qualitative analyses interpret the current zeitgeist and the works selected speak of the diverse sometimes regionalized and often multi ethnic reality of the Latin American experience The analyses elaborate on how artists reflect both the world they live in and a universal consciousness These artists are not simply digitalizing literature and these works are more than techy creations rather they make us think of other directions and connections

On the Origin of Consciousness Scott D. G. Ventureyra,2018-11-29 Have you ever thought about how self consciousness self awareness originated in the universe Understanding consciousness is one of the toughest nuts to crack In recent years scientists and philosophers have attempted to provide an answer to this mystery The reason for this is simply because it cannot be confined to solely a materialistic interpretation of the world Some scientific materialists have suggested that consciousness is merely an illusion in order to insulate their worldviews Yet consciousness is the most fundamental thing we know even more so than the external world since we require it to perceive or think about anything Without it reasoning would be impossible Dr Scott Ventureyra in this ground breaking book explores the idea of the Christian God and Creation in order to tackle this most difficult question He demonstrates that theology has something significant to offer in reflection of how consciousness originated in the universe He also makes a modest claim that the Christian conception of God and Creation provide a plausible account for the origin of self consciousness He integrates philosophy theology and science in an innovative way to embark on this exploration

The Oxford Handbook of the History of Psychology: Global Perspectives David B. Baker,2012 The science and practice of psychology has evolved around the world on different trajectories and timelines yet with a convergence on the recognition of the need for a human science that can confront the challenges facing the world today Few would argue that the standard narrative of the history of psychology has emphasized European and American traditions over others but in today s global culture there is a greater need in psychology for international understanding This volume describes the historical development of psychology in countries throughout the world Contributors provide narratives that examine the political and socioeconomic forces that have shaped their nations psychologies Each unique story adds another element to our understanding of the history of psychology The chapters in this volume remind us that there are unique contexts and circumstances that influence the ways in which the science and practice of psychology are assimilated into our daily lives Making these contexts and circumstances explicit through historical research and writing provides some promise of greater international insight as well as a better understanding of the human condition

On the (Divine) Origin of Our Species Darrel R. Falk,2023-11-30 The Bible s opening chapter includes these words So God created humans in his image in the image of God he created them male and female he created

them We are created beings with a unique status in creation Nothing is more fundamental to Christian faith Yet biologists present extensive data and provide a picture of how our species came to be but there is no Creator in the intricate details of the painting they provide If the scientific evidence for the evolution picture is reasonable and in general it is and if humans were indeed created from a common ancestor of the great apes then what can be said about the Artist who Christians believe was at work Vague answers are not satisfactory anymore not in this scientific age Recent mainstream data from paleoanthropology and genetics suggest that the basis of our species success was not that they were superior fighters Rather the reason our ancestors thrived was likely their ability to function cooperatively in groups to respect each other and to get along This reframes the question about the nature of the hovering Spirit s activity in bringing our species into being And that is the subject of this book

History of the Concept of Mind Paul S. Macdonald, 2017-09-29 In the 20th century theorists of mind were almost exclusively concerned with various versions of the materialist thesis but prior to current debates accounts of soul and mind reveal an extraordinary richness and complexity which bear careful and impartial investigation This book is the first single authored comprehensive work to examine the historical linguistic and conceptual issues involved in exploring the basic features of the human mind from its most remote origins to the beginning of the modern period MacDonald traces the development of an armature of psychical concepts from the Old Testament and Homer s works to the 18th century advocacy of an empirical science of the mind Along the way detailed attention is paid to the Presocratics Plato Aristotle the Stoics and Epicurus before turning to look at the New Testament Neoplatonism Augustine Medieval Islam Aquinas and Dante Treatment of Renaissance theories is followed by an unusual perhaps unique chapter on the words soul and mind in English literature from Chaucer to Shakespeare the story then rejoins the mainstream with analyses of Descartes Spinoza Leibniz Hobbes Locke Berkeley and Hume Chapter focused bibliographies

Progress, Apocalypse, and Completion of History and Life after Death of the Human Person in the World Religions P. Koslowski, 2013-03-09 The soul is so closely connected to life that one cannot think that it could ever be separated from life and consequently be mortal Therefore it can only be immortal This argument from Plato s *Phaedo* for the immortality of the soul exhibits both a great strength and a great weakness Its strength is that it is difficult for anyone to think that the soul could ever exist without life Its weakness is first that not all religions accept a soul that remains the same as the center of the person thus one speaks for instance in Buddhism of a soulless theory of the human being and second that what is true does not depend on what we can think but on what we recognize in experience and thought The religions believe in the existence of a power that can work contrary to our experience that the soul in death is not separated from life How the religions

believe they can establish this continued life after death and how faith in this life is related in the religions to the interpretation of history its progress its apocalyptic end and its eschatological completion and transfiguration is the theme of this book In the culture of the West in the nineteenth and twentieth centuries faith in the secular progress of the technological control of nature and the economic organization of society was the enemy of faith in the immortality of the soul

The Anthroposophical Understanding of the Soul F. W. Zeylmans van Emmichoven, 1983-03 A new psychology of the human soul Use of the word soul to denote the inner world of human experience has not been fashionable in the psychology of recent times However as Zeylmans van Emmichoven stresses in this groundbreaking study human inner life is always active as a whole entity which calls for recognition of the soul as a significant aspect of the human entity Drawing on the works of Goethe Franz Brentano Edmund Husserl Max Scheler and Rudolf Steiner this original approach to psychology uses the soul's own self-perception as the method of clarifying the mysteries of the inner life The soul as an inner world participates in two worlds an external world and a still deeper interior world The soul is revealed as a mediator between the outer physical world including the body and the inner core of the human being the I or true self Through its intentional relationship to these two worlds an ever shifting stream of dynamic polarities courses continuously through the soul love hate joy sorrow pleasure displeasure desire satisfaction laughing weeping life consciousness Many soul processes are explored in this context including doubt will mental images perceiving judgment and decision time and space experience and sexual identity as well as how the soul expresses itself in the language of dreams in everyday speech in posture in temperament and in character In addition Van Emmichoven proposes yet another dimension of the human soul through the idea of the soul's drive for development which unfolds through the Goethean laws of polarity enhancement and metamorphosis He paints a profound picture of the higher aim of human life the soul's gradual liberation from physical bonds to become an organ for the I yet always balanced by the soul's inclination to become an organ for the body Along this unfinished journey toward a full human existence he describes the roles played by love by wisdom and by inner death and resurrection As van Emmichoven points out with this understanding of the soul it is clear that there is an area where psychology and a philosophy of life overlap and indeed cannot be entirely separated If we were to define how the understanding of the soul represented in this book is related to contemporary schools of thought there are three thinkers Herder Goethe and Steiner whose spiritual outlook has had a decisive influence The fact that none of these thinkers became particularly well known in this field is not so surprising if we take into account the comprehensive wisdom and spiritual depth which distinguish their works from the introduction This book is a translation from Dutch of *De Menselijke Ziel* 1946

A History of Psychology Thomas Hardy Leahey, 2017-10-02 A History of Psychology places social economic and political forces of change alongside psychology's internal theoretical and empirical arguments illuminating how the external world has shaped psychology's development and in turn how the late twentieth century's psychology has shaped society Featuring extended treatment of important

movements such as the Enlightenment and the Scientific Revolution the textbook approaches the material from an integrative rather than wholly linear perspective The text carefully examines how issues in psychology reflect and affect concepts that lie outside the field of psychology's technical concerns as a science and profession This new edition features expanded attention on psychoanalysis after its founding as well as new developments in cognitive science artificial intelligence and behavioral economics Throughout the book strengthens its exploration of psychological ideas and the cultures in which they developed and reinforces the connections between psychology modernism and postmodernism The textbook covers scientific applied and professional psychology and is appropriate for higher level undergraduate and graduate students

Values of Our Times Deshun Li, 2013-06-01 Philosophers have gradually accepted axiology as one branch of philosophy As a basic category belonging to axiology and philosophy value is the general abstraction of concrete value formation in various fields including utility ethics and appreciation of the beauty The problem of value is essentially a problem of historical activities of practice in human society The axiology based on the scientific practice view insists on the principle of unification between theory and practice truth and value In research of axiology the relation between subjectivity and objectivity of values is a problem that must be solved in the first place The modern conversation of value philosophy is the academic and practical demands of the value philosophy research in China Value evaluation is an important part of the axiology In order to deepen the research of value philosophy and to promote the development of current value philosophy we must have scientific mode of thinking suitable for the nature of value It is the base of value relation the origin of value needs the process of value creation and actualization and the fundamental way to proving ones value as a human being

The German Conception of History Georg G. Iggers, 2014-01-01 The first comprehensive critical examination in any language of the German national tradition of historiography This is the first comprehensive critical examination in any language of the

German national tradition of historiography It analyzes the basic theoretical assumptions of the German historians of the nineteenth and twentieth centuries and relates these assumptions to political thought and action The German national tradition of historiography had its beginnings in the reaction against the Enlightenment and the French Revolution of 1789 This historiography rejected the rationalistic theory of natural law as universally valid and held that all human values must be understood within the context of the historical flux But it maintained at the same time the Lutheran doctrine that existing political institutions had a rational basis in the will of God though only a few of these historians were unqualified conservatives Most argued for liberal institutions within the authoritarian state but considered that constitutional liberties had to be subordinated to foreign policy a subordination that was to have tragic results Mr Iggers first defines Historismus or historicism and analyzes its origins Then he traces the transformation of German historical thought from Herder's cosmopolitan culture oriented nationalism to exclusive state centered nationalism of the War of Liberation and of national unification He considers the development of historicism in the writings of such thinkers as von Humboldt Ranke Dilthey Max Weber Troeltsch and Meinecke and he discusses the radicalization and ultimate disintegration of the historicist position showing how its inadequacies contributed to the political debacle of the Weimar Republic and the rise of National Socialism No one who wants to fully understand the political development of national Germany can neglect this study
