Students will be able to:

- Explain and give examples of how the motion of an object can be described by its position, direction of motion, and speed.
- Graph and interpret distance vs. time graphs for constant speed.
- Understand and apply Newton's 3 Laws of Motion.
- Understand that all changes in motion are caused by forces and that net forces result in accelerations.
- Understand and interpret free body diagrams and the various ways in which they are used to describe the forces acting upon an object.

State standards addressed:

Clinical Informatics Study Guide John T. Finnell, Brian E. Dixon, 2015-11-09 This book provides content that arms clinicians with the core knowledge and competencies necessary to be effective informatics leaders in health care organizations. The content is drawn from the areas recognized by the American Council on Graduate Medical Education (ACGME) as necessary to prepare physicians to become Board Certified in Clinical Informatics. Clinical informaticians transform health care by analyzing, designing, selecting, implementing, managing, and evaluating information and communication technologies (ICT) that enhance individual and population health outcomes, improve patient care processes, and strengthen the clinician-patient relationship. As the specialty grows, the content in this book covers areas useful to nurses, pharmacists, and information science graduate students in clinical health informatics programs. These core competencies for clinical informatics are needed by all those who lead and manage ICT in health organizations, and there are likely to be future professional certifications that require the content in this text. *Study Guide for Essentials of Nursing Research* Denise F. Polit, Cheryl Tatano Beck, 2014. *Study Guide for Essentials of Nursing Research* 8e augments the text and provides students with exercises for each text chapter that furthers their understanding and application of the text content.
