Task Oriented Gait Training Yang-Soo Lee, 2024-09-26 Safe and independent gait is one of the most important physical function of human. Gait training is essential to people with gait difficulty. Although there are many types of gait training strategy, there is no consensus on which one is the best. Gait training strategy can be divided into compensatory approaches and restorative approaches. Although people with severe impairment wish to restore normal walking, it is too difficult to use their involved body part normally in gait. Also, people use compensatory approaches in gait even in training session. Therefore, forced use of involved body part is indispensable in gait training to people with severe impairment. This book introduces new gait training frame which uses forced use of affected body part. First, strengthening of weakened muscle; second, step up with affected lower limb; third, step down with weight support with affected lower limb; and fourth is step down touch. Actual gait training starts after people can support their body weight and maintain balance with affected lower limb without using hand. With this approach, people can restore impaired body function, regain more normal gait, and can reach optimal outcome.

Man-Machine-Environment System Engineering: Proceedings of the 21st International Conference on MMESE Shengzhao Long, Balbir S. Dhillon, 2021-09-21 Man Machine Environment System Engineering Proceedings of the 21st Conference on MMESE is the academic showcase of best research papers selected from more than 500 submissions each year. From this book, reader will learn the best research topics and the latest development trend in MMESE design theory and other human centered system application. MMESE focus mainly on the relationship between Man, Machine, and Environment. It studies the optimum combination of man machine environment systems. In the system, the Man means the working people as the subject in the workplace, e.g., operator, decision maker; the Machine means the general name of any object controlled by the Man, including tool, machinery, computer system, and technology; the Environment means the specially working conditions under which Man and Machine occupy together, e.g., temperature, noise, vibration, hazardous gases, etc. The three goals of the optimization of the system are safety, efficiency, and economy. In 1981, with direct support from one of the greatest modern Chinese scientists, Qian Xuesen, Man Machine Environment System Engineering MMESE, the integrated and advanced science research topic, was established in China by Professor Shengzhao Long. In the letter to Shengzhao Long in October 22nd 1993, Qian Xuesen wrote, "You have created a very important modern science subject and technology in China."
