

Motion

Motion

- Change in position of an object with respect to time.
- Change in position is based on the reference point of an individual.

Scalar quantity

- Quantities having only magnitude and no direction.
- Examples: Speed, mass, distance, volume, etc.

Vector quantity

- Quantities having both magnitude and direction.
- Change in either magnitude or the direction, changes the value of the vector quantity.
- Examples: Velocity, acceleration, force, displacement, etc.

Equations of Motion

- $v = u + at$
- $v^2 = u^2 + 2as$
- $s = ut + \frac{1}{2}at^2$

Where,

s = displacement
 u = initial velocity
 v = final velocity
 a = acceleration
 t = time of motion

Distance

- Length of the total path travelled by a body.
- SI Unit: metre(m)

Displacement

- Length of the shortest path travelled by a body.
- SI Unit: metre(m)

Acceleration

- Rate of change of velocity with time.
- SI Unit: metre/second squared (m/s^2)

Distance -Time Graph

- Determines the change in the position of the object.
- Slope gives the speed of the object.
- Line graph of uniform motion is always a straight line.
- Time lies on the x-axis while the distance on the y-axis.

Velocity -Time Graph

- Slope gives the acceleration of the object.
- Line graph of uniform velocity is a straight line.
- Time lies on the x-axis while the velocity on the y-axis.
- Distance travelled is the area under the graph.

Speed

- Distance travelled by a body per unit time.
- SI Unit: metre/second (m/s)

$$\text{Speed} = \frac{\text{Distance}}{\text{Time}}$$

Uniform Speed

- Body travelling equal distance at equal intervals of time.
- Average speed = Speed

Non-uniform Speed

- Body travelling unequal distance at equal intervals of time.
- Average speed

$$= \frac{\text{Total distance travelled}}{\text{Total time taken}}$$

Uniform Circular Motion

- Body undergoing circular motion at a constant speed.

- Body traces a circle with a fixed centre.
- At every point, the body changes its direction.

Terminologies of Uniform Circular motion

Time Period (T)

Time taken by the body to complete one revolution.

Angular Speed

Speed of the object in rotational motion. It is the rate at which the angle subtended at the centre changes.

$$\text{Angular speed, } \omega = \frac{2\pi}{T}$$

Frequency (f)

The number of revolutions the body completes in one second

$$f = \frac{1}{T} \quad \text{Unit: Hertz (Hz)}$$

Centripetal Force

Centripetal force is the force acting on a body in a circular path. It points towards the centre around which the body is moving.

$$\text{Centripetal Force, } F = \frac{mv^2}{r}$$

Kyle, 2019-05-16 This book is an attempt to address two struggles for theistic educators e g those who approach their educational vocation from a religious perspective whether they are working in secular or faith based institutions The first struggle is that while numerous guidelines on teaching excellence have been compiled the resulting checklists can contain more than a hundred criteria to consider This book therefore identifies the evidence based guidelines that are likely to have the highest impact on student achievement thereby empowering educators to focus their efforts in more substantial

ways The second struggle is related to the lack of resources which can help educators to view and approach their vocation from a theistic perspective While there are texts that discuss the relationship of spirituality and or theology to education few to date have sought to bring evidence based educational literature into dialogue with the western Christian tradition and thereby develop a bottom up theology of education This book addresses this historical and theological gap Overall this book is therefore intended to not only provide theistic educators with high impact guidelines that can significantly improve the quality of education in their school systems but it also strives to do so from a thoroughly theistic perspective **Districts on the Move** Jay Westover, 2019-08-16 Building off the framework Fullan and Quinn introduced in the International best seller Coherence The Right Drivers in Action for Schools Districts and Systems Westover presents a roadmap to help district and school leaders navigate the journey of creating a coherent system of continuous improvement Based on more than 15 years of successful partnerships with school districts this book includes case studies of how districts progressed over time leadership competencies shown to be critical factors for success tools and rubrics for action planning and guiding implementation and reflective questions for inquiring about the current state of district systems and practices and strategies for systemic improvements efforts Readers will discover Benchmarks of Capacity that will serve as guideposts to Create clarity of district goals and school priorities for student learning Cultivate a culture of shared leadership and systemic collaboration Develop collective expertise with a coherent instructional framework Engage in evidence based cycles of inquiry for continuous improvement Learn how to lead systemic improvement that builds capacity at the classroom school and district levels
