Applications, Tools and Techniques on the Road to Exascale Computing K. De Bosschere,E.H. D'Hollander,G.R. Joubert,2012-05-09 Single processing units have now reached a point where further major improvements in their performance are restricted by their physical limitations This is causing a slowing down in advances at the same time as new scientific challenges are demanding exascale speed This has meant that parallel processing has become key to High Performance Computing HPC This book contains the proceedings of the 14th biennial ParCo conference ParCo2011 held in Ghent Belgium The ParCo conferences have traditionally concentrated on three main themes Algorithms Architectures and Applications Nowadays though the focus has shifted from traditional multiprocessor topologies to heterogeneous and manycores incorporating standard CPUs GPUs Graphics Processing Units and FPGAs Field Programmable Gate Arrays These platforms are at a higher abstraction level integrated in clusters grids and clouds The papers presented here reflect this change of focus New architectures programming tools and techniques are also explored and the need for exascale hardware and software was also discussed in the industrial session of the conference This book will be of interest to all those interested in parallel computing today and progress towards the exascale computing of tomorrow

Proceedings of the 2025 10th International Conference on Financial Innovation and Economic Development (ICFIED 2025) Maizaitulaidawati Md Husin,Tomoki Fujii,Xiaodong Lai,Azlina Binti Md Yassin,2025-05-02 This is an open access book Financial globalization plays a huge role in promoting the development of the world economy and the optimal allocation of world resources stimulates the accelerated development of the international division of labor and increases the international flow of production factors such as industrial transfer capital transfer and technology transfer It enables developing countries to make up for the lack of their own capital and technology and obtain industrial evolution technological progress and institutional innovation thereby accelerating the speed of economic development it also enables developed countries to open up cheap labor raw material markets and broad consumer markets prolonging product value More profits ease the economy the contradiction of stagflation and restore economic growth At the current stage the overall environment

of the international financial market is relatively stable and the market environment has been improved to some extent. However, due to the complexity and diversity of the world economy coupled with the national characteristics of some countries, there is great uncertainty in international policies which has greatly affected the stability of the international financial market. In addition, the current international environment is changing. The conflict between Russia and Ukraine, the epidemic, and the Taiwan issue have all had an impact on the international economic situation. This is also the difference between this conference and previous conferences; we hope to have a deeper discussion on the current situation. **GPU**

Parallel Program Development Using CUDA Tolga Soyata, 2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs. This approach prepares the reader for the next generation and future generations of GPUs. The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific. At the same time, the book also provides platform dependent explanations that are as valuable as generalized GPU concepts. The book consists of three separate parts; it starts by explaining parallelism using CPU multi threading in Part I. A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads. Multiple ways of parallelizing the same task are analyzed and their pros and cons are studied in terms of both core and memory operation. Part II of the book introduces GPU massive parallelism. The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated. Because the core and memory structures of CPUs and GPUs are different, the results differ in interesting ways. The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs. Part III of the book provides pointers for readers who want to expand their horizons. It provides a brief introduction to popular CUDA libraries such as cuBLAS, cuFFT, NPP, and Thrust, the OpenCL programming language, an overview of GPU programming using other programming languages and API libraries such as Python, OpenCV, OpenGL, and Apple's Swift and Metal, and the deep learning library cuDNN. *c't KI-Praxis* c't-Redaktion, 2023-11-15 Das Sonderheft c't KI Praxis liefert Tests und praktische Anleitungen für die Arbeit mit Chatbots. Es erklärt warum Sprachmodelle Fehler machen und wie man sie verringern kann. Dies hilft nicht nur wenn man Fragen und Aufträge an einen der online angebotenen Chatbots bermittelt. Will oder darf man beispielsweise aus Datenschutzgründen die Cloud Dienste nicht nutzen kann man sich auch eine eigene Sprach KI einrichten. Die c't Redaktion erklärt wo man ein geeignetes Sprachmodell findet wie man es lokal hostet und bei welchen Dienstleistern man es hosten kann. Dass generative KI immer produktiver einsetzbar ist birgt Chancen und Risiken zugleich. Um Chancen zu nutzen und Risiken zu minimieren helfen geeignete Spielregeln für den KI Einsatz in Schule Ausbildung und Beruf. **Advanced Data Mining and Applications** Changjie Tang, 2008-09-29 This book constitutes the refereed proceedings of the 4th International Conference on Advanced Data Mining and Applications ADMA 2008 held in Chengdu China in October 2008. Fast and Accurate Finite-Element Multigrid Solvers for PDE Simulations on GPU Clusters Dominik Göddeke, 2011 This dissertation demonstrates that graphics processors GPUs as representatives of emerging many core architectures are very well suited for the fast and accurate solution of large sparse linear systems of equations using parallel multigrid methods on heterogeneous compute clusters Such systems arise for instance in the discretisation of elliptic partial differential equations with finite elements Fine granular parallelisation techniques and methods to ensure accuracy are developed that enable at least one order of magnitude speedup over highly tuned conventional CPU implementations without sacrificing neither accuracy nor functionality
