Deep Learning with R, Second Edition Francois Chollet,Tomasz Kalinowski,J. J. Allaire,2022-07-26 Deep Learning with R Second Edition shows you how to put deep learning into action It s based on the revised new edition of Fran ois Chollet s bestselling Deep Learning with Python All code and examples have been expertly translated to the R language by Tomasz Kalinowski who maintains the Keras and Tensorflow R packages at RStudio Novices and experienced ML practitioners will love the expert insights practical techniques and important theory for building neural networks

GPU Programming in MATLAB Nikolaos Ploskas,Nikolaos Samaras,2016-08-25 GPU programming in MATLAB is intended for scientists engineers or students who develop or maintain applications in MATLAB and would like to accelerate their codes using GPU programming without losing the many benefits of MATLAB The book starts with coverage of the Parallel Computing Toolbox and other MATLAB toolboxes for GPU computing which allow applications to be ported straightforwardly onto GPUs without extensive knowledge of GPU programming The next part covers built in GPU enabled features of MATLAB including options to leverage GPUs across multicore or different computer systems Finally advanced material includes CUDA code in MATLAB and optimizing existing GPU applications Throughout the book examples and source codes illustrate every concept so that readers can immediately apply them to their own development Provides in depth comprehensive coverage of GPUs with MATLAB including the parallel computing toolbox and built in features for other MATLAB toolboxes Explains how to accelerate computationally

heavy applications in MATLAB without the need to re write them in another language Presents case studies illustrating key concepts across multiple fields Includes source code sample datasets and lecture slides

Hands-On GPU Computing with Python Avimanyu Bandyopadhyay, 2019-05-14 Explore GPU enabled programmable environment for machine learning scientific applications and gaming using PuCUDA PyOpenGL and Anaconda Accelerate Key Features Understand effective synchronization strategies for faster processing using GPUs Write parallel processing scripts with PyCuda and PyOpenCL Learn to use the CUDA libraries like CuDNN for deep learning on GPUs Book Description GPUs are proving to be excellent general purpose parallel computing solutions for high performance tasks such as deep learning and scientific computing This book will be your guide to getting started with GPU computing It will start with introducing GPU computing and explain the architecture and programming models for GPUs You will learn by example how to perform GPU programming with Python and you ll look at using integrations such as PyCUDA PyOpenCL CuPy and Numba with Anaconda for various tasks such as machine learning and data mining Going further you will get to grips with GPU work flows management and deployment using modern containerization solutions Toward the end of the book you will get familiar with the principles of distributed computing for training machine learning models and enhancing efficiency and performance By the end of this book you will be able to set up a GPU ecosystem for running complex applications and data models that demand great processing capabilities and be able to efficiently manage memory to compute your application effectively and quickly What you will learn Utilize Python libraries and frameworks for GPU acceleration Set up a GPU enabled programmable machine learning environment on your system with Anaconda Deploy your machine learning system on cloud containers with illustrated examples Explore PyCUDA and PyOpenCL and compare them with platforms such as CUDA OpenCL and ROCm Perform data mining tasks with machine learning models on GPUs Extend your knowledge of GPU computing in scientific applications Who this book is for Data Scientist Machine Learning enthusiasts and professionals who wants to get started with GPU computation and perform the complex tasks with low latency Intermediate knowledge of Python programming is assumed

GPU Parallel Program Development Using CUDA Tolga Soyata, 2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same programs are parallelized on multiple Nvidia GPU platforms and the same

performance analysis is repeated Because the core and memory structures of CPUs and GPUs are different the results differ in interesting ways The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs Part III of the book provides pointer for readers who want to expand their horizons It provides a brief introduction to popular CUDA libraries such as cuBLAS cuFFT NPP and Thrust the OpenCL programming language an overview of GPU programming using other programming languages and API libraries such as Python OpenCV OpenGL and Apple s Swift and Metal and the deep learning library cuDNN ITNG 2021 18th International Conference on Information Technology-New Generations Shahram Latifi,2021-06-04 This volume represents the 18th International Conference on Information Technology New Generations ITNG 2021 ITNG is an annual event focusing on state of the art technologies pertaining to digital information and communications The applications of advanced information technology to such domains as astronomy biology education geosciences security and health care are the among topics of relevance to ITNG Visionary ideas theoretical and experimental results as well as prototypes designs and tools that help the information readily flow to the user are of special interest Machine Learning Robotics High Performance Computing and Innovative Methods of Computing are examples of related topics The conference features keynote speakers a best student award poster award service award a technical open panel and workshops exhibits from industry government and academia This publication is unique as it captures modern trends in IT with a balance of theoretical and experimental work Most other work focus either on theoretical or experimental but not both Accordingly we do not know of any competitive literature **Computer Vision - ECCV 2020** Andrea Vedaldi,Horst Bischof,Thomas Brox,Jan-Michael Frahm,2020-11-03 The 30 volume set comprising the LNCS books 12346 until 12375 constitutes the refereed proceedings of the 16th European Conference on Computer Vision ECCV 2020 which was planned to be held in Glasgow UK during August 23 28 2020 The conference was held virtually due to the COVID 19 pandemic The 1360 revised papers presented in these proceedings were carefully reviewed and selected from a total of 5025 submissions The papers deal with topics such as computer vision machine learning deep neural networks reinforcement learning object recognition image classification image processing object detection semantic segmentation human pose estimation 3d reconstruction stereo vision computational photography neural networks image coding image reconstruction object recognition motion estimation *High Performance Computing* Ana-Lucia Varbanescu,Abhinav Bhatele,Piotr Luszczek,Baboulin Marc,2022-05-29 This book constitutes the refereed proceedings of the 37th International Conference on High Performance Computing ISC High Performance 2022 held in Hamburg Germany during May 29 June 2 2022 The 18 full papers presented were carefully reviewed and selected from 53 submissions The papers are categorized into the following topical sub headings Architecture Networks and Storage Machine Learning AI Emerging Technologies HPC Algorithms and Applications Performance Modeling Evaluation and Analysis and Programming Environments and Systems Software **Promptologie** Olaf Giermann,Michael J. Radiation Therapy Dosimetry Arash Darafsheh,2021-03-08 This comprehensive book covers the everyday use and underlying principles of radiation dosimeters used in radiation oncology clinics It provides an up to date reference spanning the full range of current modalities with emphasis on practical know how The main audience is medical physicists radiation oncology physics residents and medical physics graduate students The reader gains the necessary tools for determining which detector is best for a given application Dosimetry of cutting edge techniques from radiosurgery to MRI guided systems to small fields and proton therapy are all addressed Main topics include fundamentals of radiation dosimeters brachytherapy and external beam radiation therapy dosimetry and dosimetry of imaging modalities Comprised of 30 chapters authored by leading experts in the medical physics community the book Covers the basic principles and practical use of radiation dosimeters in radiation oncology clinics across the full range of current modalities Focuses on providing practical guidance for those using these detectors in the clinic Explains which detector is more suitable for a particular application Discusses the state of the art in radiotherapy approaches from radiosurgery and MR guided systems to advanced range verification techniques in proton therapy Gives critical comparisons of dosimeters for photon electron and proton therapies

Parallel Computing: Technology Trends Ian Foster,Ludek Kucera,Wolfgang E. Nagel,Frans

Peters,2020-03-15 The year 2019 marked four decades of cluster computing a history that began in 1979 when the first cluster systems using Components Off The Shelf COTS became operational This achievement resulted in a rapidly growing interest in affordable parallel computing for solving compute intensive and large scale problems It also directly lead to the founding of the Parco conference series Starting in 1983 the International Conference on Parallel Computing ParCo has long been a leading venue for discussions of important developments applications and future trends in cluster computing parallel computing and high performance computing ParCo2019 held in Prague Czech Republic from 10 13 September 2019 was no exception Its papers invited talks and specialized mini symposia addressed cutting edge topics in computer architectures programming methods for specialized devices such as field programmable gate arrays FPGAs and graphical processing units GPUs innovative applications of parallel computers approaches to reproducibility in parallel computations and other relevant areas This book presents the proceedings of ParCo2019 with the goal of making the many fascinating topics discussed at the meeting accessible to a broader audience The proceedings contains 57 contributions in total all of which have been peer reviewed after their presentation These papers give a wide ranging overview of the current status of research developments and applications in parallel computing **Security, Privacy, and Applied Cryptography Engineering** Rajat Subhra Chakraborty,Peter Schwabe,Jon Solworth,2015-09-24 This book constitutes the refereed proceedings of the 5th International Conference on Security Privacy and Applied Cryptography Engineering SPACE 2015 held in Jaipur India in October 2015 The 17 full papers presented in this volume were carefully reviewed and selected from 57 submissions The book also contains 4 invited talks in full paper length The papers are devoted to various aspects of security privacy applied cryptography and cryptographic engineering **Bridging Horizons in Artificial Intelligence, Robotics, Cybersecurity, Smart Cities, and Digital Economy** Klodian Dhoska,Evjola Spaho,2025-03-15 This book aims to foster interdisciplinary research among industry and academic participants and form long term strategic links It provides a presentation of new knowledge and development through the exchange of practical experience between industry scientific institutes and business The carefully selected conference themes have been chosen to engender these in the fields of engineering industry information technology business economics and finance and applied sciences This book aims to provide the latest research findings innovative research results methods and development techniques from both theoretical and practical perspectives related to the emerging areas of artificial intelligence cybersecurity robotics and automation smart technologies data analytics and data science network and communication cloud and mobile computing Internet of things virtual augmented and mixed reality technology in applied science digital economy management and business finance and accounting statistics and econometrics economics and social sciences **The Crux** Richard Rumelt,2022-04-28 A FINANCIAL TIMES BUSINESS BOOK OF THE YEAR A straight talking guide to corporate strategy and how to frame and pursue it Financial Times The most important part of a leader s job is to set in motion the actions today that will build a better future tomorrow in other words strategy But how

do leaders become strategists In this ground breaking book Richard Rumelt the world s leading authority on strategy shows how finding the crux of a challenge is the essence of the strategist s skill The crux is the key issue where action will best pay off and Rumelt reveals how to pinpoint it so you can focus energy on what really matters Drawing on decades of professional and academic experience and through vivid storytelling of some of the most important business decisions of recent times Rumelt illuminates how leaders can overcome obstacles navigate uncertainty and determine the best path forward Strategy is not about setting financial targets statements of desired outcomes or performance goals it is about finding the crux and taking decisive coherent action

GPU Programming with C++ and CUDA Paulo Motta,2025-08-29 Learn to solve parallel problems with GPU accelerated C code and create reusable libraries that can be accessed from other programming languages Key Features Harness the power of GPU parallelism to accelerate real world tasks Utilize CUDA streams and scale performance with custom C solutions Create reusable GPU libraries and expose them to Python seamlessly Book DescriptionWritten by Paulo Motta a senior researcher with decades of experience this comprehensive GPU programming book is an essential guide for leveraging the power of parallelism to accelerate your computations The first section introduces the concept of parallelism and provides practical advice on how to think about and utilize it effectively Starting with a basic GPU program you then gain hands on experience in managing the device This foundational knowledge is then expanded by parallelizing the program to illustrate how GPUs enhance performance The second section explores GPU architecture and implementation strategies for parallel algorithms and offers practical insights into optimizing resource usage for efficient execution In the final section you will explore advanced topics such as utilizing CUDA streams You will also learn how to package and distribute GPU accelerated libraries for the Python ecosystem extending the reach and impact of your work Combining expert insight with real world problem solving this book is a valuable resource for developers and researchers aiming to harness the full potential of GPU computing The blend of theoretical foundations practical programming techniques and advanced optimization strategies it offers is sure to help you succeed in the fast evolving field of GPU programming What you will learn Manage GPU devices and accelerate your applications Apply parallelism effectively using CUDA and C Choose between existing libraries and custom GPU solutions Package GPU code into libraries for use with Python Explore advanced topics such as CUDA streams Implement optimization strategies for resource efficient execution Who this book is for C developers and programmers interested in accelerating applications using GPU programming will benefit from this book It is suitable for those with solid C experience who want to explore high performance computing techniques Familiarity with operating system fundamentals will help when dealing with device memory and communication in advanced chapters

Parallel and High-Performance Computing in Artificial Intelligence Mukesh Raghuwanshi,Pradnya Borkar,Rutvij H.
