Wireless Communications Fundamental & Advanced Concepts Sanjay Kumar, 2015-03-31 Wireless communication is one of the fastest growing fields in the engineering world today. Rapid growth in the domain of wireless communication systems, services, and application has drastically changed the way we live, work, and communicate. Wireless communication offers a broad and dynamic technological field which has stimulated incredible excitements and technological advancements over the last few decades. The expectations from wireless communication technology are increasing every day. This is placing enormous challenges to wireless system designers. Moreover, this has created an ever-increasing demand for conceptually strong and well-versed communication engineers who understand the wireless technology and its future possibilities. In recent years, significant progress in wireless communication system design has taken place, which will continue in the future. Especially for the last two decades, the research contributions in wireless communication system design have resulted in several new concepts and inventions at remarkable speed. A text book is indeed required to offer familiarity with such developments and underlying concepts to be taught in the classroom to future engineers. This is one of the motivations for writing this book. Practically, no book can be up to date in this field due to the fast ongoing research and developments. The new developments are announced almost every day. Teaching directly from the research papers in the classroom cannot build the necessary foundation. Therefore, the need for a textbook is unavoidable, which is integral to learning and is an essential source to build the concept. The prime goal of this book is to cooperate in the learning process. This book is based on current research as well as classical text books in the field and aims to provide in-depth understanding on fundamental concepts which form the basis of wireless communication and build the platform on which current developments can be understood and future contributions can be made. This book is written in a self-explanatory manner to facilitate critical thinking and to support self-study. Special emphasis has been given in this book to systematically organize and present the wide domain of wireless communication technology. Extra care has been taken to present the contents and the concepts in a user-friendly way to enable an easy understanding. Therefore, the language of this book is made to make one feel like listening to a classroom lecture. This makes learning straightforward. Sometimes, the explanation could seem to be oversimplified; this is in order to support a wide spectrum of readers as well as to clarify the hazy picture. A book of this kind, which addresses a fast-developing technology, the frequent use of acronyms and abbreviations is almost inevitable. A care has been taken to spell the acronyms and abbreviations as frequently as practically suitable in the text. Besides a list of acronyms and abbreviations, has also been provided.

WLAN-based Indoor Navigation. What are the new technical possibilities? Valentina Barysava, 2019-09-18 Seminar paper from the year 2014 in the subject Computer Science Internet New Technologies University of Applied Sciences Braunschweig Wolfenbüttel Salzgitter language English abstract The paper is intended to give the reader an overview of WLAN-based indoor navigation In addition it is shown that such navigation is already possible within buildings and it also shows which obstacles still exist Due to the rapid development of mobile devices especially with regard to their performance the possibilities of navigation with these devices are increasing Especially in the area of indoor navigation there is still a lot of potential The problem is that the GPS signal is not available inside buildings and therefore navigation is not possible with normal applications as these no longer receive a signal from the satellites and thus the position of the mobile device can no longer be determined For this problem the technical variants of indoor navigation are used which are explained in this paper However the possibilities of indoor navigation also have their problems Many technologies have a high initial cost as the map material first has to be made available and usually has to be digitised first In many areas the technology must first be retrofitted in order to really achieve the desired performance The accuracy of position determination also plays a role so it is important that the technology can guarantee high accuracy in position calculation The topic is of particular relevance to us because these technologies have great potential and enable seamless navigation within buildings It is precisely the multitude of possibilities that makes the topic very interesting and it is important to find out which of these technical possibilities are really suitable for use and so interesting for the user
