Human decisions especially in management and personnel selection are based on making judgments about people analytically and intuitively Yet in business and scientific contexts judgments are expected to be based on a rational analysis rather than intuitions or emotions Intuition is often seen as something mystical that should not be trusted and thus eliminated from human decision making Our empirical and theoretical research shows that this is impossible when people are dealing with people Instead intuitions and emotions have significant power in the decision making process Neuroscience even shows that humans are incapable of switching off their emotions or intuitions when making decisions Therefore intuition and emotions as evolutionary achievements of human beings should be looked at more closely to use the wisdom they offer This book provides an insight into the current state of research on rational analytical procedures in personnel selection and complements this with research on intuitions and emotions in personnel diagnostics By integrating

scientifically verifiable rational analytical decision making procedures with the inner experiential knowledge of people this book bridges two complementary ways of recognizing and making good decisions It demonstrates how intuitions are developed and used in different fields of practice and cultures and how scientific research results from rational analytical and intuitive emotional selection procedures are successfully integrated by practitioners *Ironwill 360° Leadership* Douglas P. Ravindra,2024-01-01 Today over half

the world's population or about 4 billion people live in cities and towns. One in every ten urban residents of the world are in India's urban centers, a proportion that is expected to increase to one in five by 2050. Urban areas have increasingly become central to society, culture, and the economy that define who we are as a civilization. Thus, urbanisation in India presents enormous opportunities and challenges in terms of governing the human, social, financial, and environmental capital of this process. In this book, Dr. Ravindra brings to bear his decades of experience in grappling with this transformation, especially in his highly urbanized home state of Karnataka, and articulates the dissonances between governance policy and practice. He chronologically outlines urbanisation in India with a focus on aspects of governance that give context to the state of our cities. His immense knowledge of urban land, infrastructure, finance, housing, climate change, and environment, and narrations of many personal experiences from the 1960s to the present enrich this book. Touching upon the absence of adequate epistemology in the discourse on urban development, which can capture the dynamics of our cities, the text suggests a few critical frameworks on planning for future urbanisation in India. Reflecting on our many failures in managing urbanisation, the book highlights integrated territorial approaches and questions power sharing in urban governance. In an era dominated by flagship urban schemes and programmes, the book re-centers the question of urban governance with the aim of providing avenues to make our cities livable again.
