SPARK-ing Big Questions: What is the Future of Health Technology? Claudia Marcelloni, James Gillies, Ana Godinho, 2024-05-31 Have you ever been assigned a group project in which your team had to work together to solve some sort of problem? Although not everyone always agrees, you may have learned that collaborating with people who have unique perspectives and interests is a really effective way to generate new exciting solutions, solutions that nobody could have come up with alone. This is the idea behind an event called SPARKS Future Technology for Health, which was held at CERN, one of the world's largest and most respected centers for scientific research. A group of around 50 experts in diverse fields ranging from medicine to computer science to nuclear physics joined forces to collaborate, learn, and unlearn together, all in the name of improving human health. Technologies with the power to change human lives come with tremendous responsibility. After short talks on cutting-edge health advances, SPARKS participants broke into smaller groups to discuss and debate big unanswered questions about these new technologies: Who owns the health data generated by smart watches and other devices? What role should artificial intelligence play in health care? How can we make sure that non-scientists trust new health technologies? These and other tough questions do not have simple answers. For new health technologies to be accepted and used responsibly, society, including you, the next generation, will need to grapple with such questions for years to come. This Collection highlights some groundbreaking health-related technologies discussed at the SPARKS Forum, with a focus on the unanswered questions that must be addressed before these life-changing advances can responsibly impact human lives. If you enjoy learning about exciting health-related advances and like to think about difficult big picture questions involving science and society, this collection is for you. Like all Frontiers for Young Minds articles, this collection is reviewed by young students. We hope this collection SPARKS your interest in the future of human health.

Managing Science Claude Gelès, Gilles Lindecker, Mel Month, Christian Roche, 2008-07-11 A unique how-to manual for the management of scientific laboratories. This book presents a complete set of tools for the management of research and development laboratories and projects. With an emphasis on knowledge rather than profit as a measure of output and performance, the authors apply standard management principles and techniques to the needs of high flux, open-ended, separately funded science and technology enterprises. They

also propose the novel idea that failure and incipient failure is an important measure of an organization's potential. From the management of complex round the clock high tech operations to strategies for long term planning *Managing Science Management for R D Laboratories* discusses how to build projects with the proper research and development obtain and account for funding and deal with rapidly changing technologies facilities and trends. The entire second part of the book is devoted to personnel issues and the impact of workplace behavior on the various functions of a knowledge based organization. Drawing on four decades of involvement with the management of scientific laboratories the authors thoroughly illustrate their philosophy with real world examples from the physics field and provide tables and charts. Managers of scientific laboratories as well as scientists and engineers expecting to move into management will find *Managing Science Management for R D Laboratories* an invaluable practical guide.
