Food for All in Africa Gordon Conway, Ousmane Badiane, Katrin Glatzel, 2019-11-15 Africa requires a new agricultural transformation that is appropriate for Africa that recognizes the continent's diverse environments and climates and that takes into account its histories and cultures while benefiting rural smallholder farmers and their families In this boldly optimistic book Sir Gordon Conway Ousmane Badiane and Katrin Glatzel describe the key challenges faced by Africa's smallholder farmers and present the concepts and practices of Sustainable Intensification SI as opportunities to sustainably transform Africa's agriculture sector and the livelihoods of millions of smallholders The way forward they write will be an agriculture sector deeply rooted within SI producing more with less using fertilizers and pesticides more prudently adapting to climate change improving natural capital adopting new technologies and building resilience at every stage of the agriculture value chain Food for All in Africa envisions a virtuous circle generated through agricultural development rooted in SI that results in greater yields healthier diets improved livelihoods for farmers and sustainable economic opportunities for the rural poor that in turn generate further investment It describes the benefits of digital technologies for farmers and the challenges of transforming African agricultural policies and creating effective and inspiring leadership Food for All in Africa demonstrates why we should take on the challenge and provides ideas and methods through which it can be met

Making Markets More Inclusive K. McKague, M. Siddiquee, 2014-07-24 Most studies of doing business at the bottom of the economic pyramid focus on viewing the poor as consumers as micro entrepreneurs or as potential employees of local companies Almost no analysis focuses on the poor as primary producers of agricultural commodities a striking omission given that primary producers are by far the largest

segment of the working age population in developing economies Making Markets More Inclusive bridges the management literature with original research on agricultural value chains in developing and emerging economies This exciting work is the first to delve into the skills capabilities strategies and approaches needed for inclusive value chain development McKague shows how NGOs and companies can connect poor producers in developing economies with the right markets to better create social and economic impact He also analyzes one of the leading agricultural value chain initiatives in the world which is being replicated by the Bill and Melinda Gates Foundation in several different value chains in Malawi Tanzania Ghana India and Mali Want more Check out these compelling videos which provide a glimpse into the stories and examples used throughout the book Video Trailer for Making Markets More Inclusive Farmer Training Kallani Rani increased the productivity of her cows become a cattle feed seller in her village Chapter 6 and opened a fresh milk canteen in her local market Chapter 7 She now trains other women farmers and works to improve opportunities for women in her community Chapter 5 Animal Health Care Services Asma Husna trained to be an animal health worker with CARE to provide important animal health services and education to local farmers on a fee for service basis Chapter 6 Cattle Feed Shops Fulera Akter started a business as a cattle feed seller after demand for nutritional animal feed grew due to farmers improved knowledge of nutrition Chapter 6 Savings Groups Coauthor Muhammad Siddiquee the Coordinator of Agriculture and Value Chain Programs at CARE Bangladesh discusses the value of farmer savings groups Chapter 6 Milk Collection Sarothi Rani became a milk collector to earn an improved income for her family and provide an important service to other dairy farmers in her community Chapter 7 Digital Fat Testing Introducing digital fat testing machines into the dairy value chain helped reward farmers for making investments in producing higher quality milk as well as ensuring transparent and timely payments Chapter 7 Microfranchising Supporting agricultural input shop owners with training relationships to suppliers common branding and standardized customer services improves the productivity of smallholder farmers and the profitability of shops Chapter 12 Bangladesh Dairy Value Chain Learning Reflections from some of the 40 CARE staff from 17 countries who came to Bangladesh to learn from the experience of the dairy value chain project Chapter 15 Food Security and Scarcity C. Peter Timmer, 2015-01-06 In countries that have managed to confront and cope with the challenges of food insecurity over the past two centuries markets have done the heavy lifting Markets serve as the arena for allocating society's scarce resources to meet the virtually unlimited needs and desires of consumers no other mechanism can efficiently signal fluctuations in scarcity and abundance the cost of labor or the value of commodities But markets fail at tasks that society regards as important thus governments have had to intervene to stabilize the economic environment and provide essential public goods such as transportation and communications networks agricultural research and development and access to quality health and educational facilities Ending hunger requires that each society find the right balance of market forces and government interventions to drive a process of economic growth that reaches the poor and ensures that food supplies are

readily and reliably available and accessible to even the poorest households But locating that balance has been a major challenge for many countries and seems to be getting more difficult as the global economy becomes more integrated and less stable Food Security and Scarcity explains what forms those challenges take in the long run and short term and at global national and household levels C Peter Timmer best known for his work on the definitive text Food Policy Analysis draws on decades of food security research and analysis to produce the most comprehensive and up to date assessment of what makes a productive sustainable and stable food system and why so many countries have fallen short Poverty and hunger are different in every country so the manner of coping with the challenges of ending hunger and keeping it at bay will depend on equally country specific analysis governance and solutions Timmer shows that for all their problems and failures markets and food prices are ultimately central to solving the problem of hunger and that any coherent strategy to improve food security will depend on an in depth understanding of how food markets operate Published in association with the Center for Global Development

Food, Genetic Engineering and Philosophy of Technology N. Dane Scott, 2018-10-22 This book describes specific well know controversies in the genetic modification debate and connects them to deeper philosophical issues in philosophy of technology It contributes to the current far reaching deliberations about the future of food agriculture and society Controversies over so called Genetically Modified Organisms GMOs regularly appear in the press The biotechnology debate has settled into a long term philosophical dispute The discussion goes much deeper than the initial empirical questions about whether or not GM food and crops are safe for human consumption or pose environmental harms that dominated news reports In fact the implications of this debate extend beyond the sphere of food and agriculture to encompass the general role of science and technology in society The GM controversy provides an occasion to explore important issues in philosophy of technology Researchers teachers and students interested in agricultural biotechnology philosophy of technology and the future of food and agriculture will find this exploration timely and thought provoking

Break Open the Sky Stephan Bauman, 2017-05-23 In a World that Thrives on Fear Have Faith Compared to all previous generations we are safer live longer hurt less and earn more Yet we are more afraid than ever Fear has slipped into our souls leaving us on edge and constantly anxious No longer a safe harbor a source of strength or a bastion for love faith has fallen prey to a culture of fear We face a defining moment Will we cave to fear or rise in faith Stephan Bauman the former president of World Relief has seen firsthand in some of the most difficult places in the world how it is possible to embrace love in the face of fear Break Open the Sky is an invitation to live in authentic faith free from fear and its debilitating symptoms By embracing Jesus s core yet counterintuitive teachings on truth love and risk you can find freedom from the fear of the unknown release from the uncertainty of the other and liberation from the anxieties that hold you back Are you ready to pursue a countercultural kingdom of grace and love rather than safety and comfort If so here is your guide for changing the atmosphere of your culture church and world It will only happen as you take risks big enough to break open the sky

Biological Nitrogen Fixation Frans J. de Bruijn, 2015-06-16 Nitrogen is arguably the most important nutrient required by plants. However, the availability of nitrogen is limited in many soils, and although the earth's atmosphere consists of 78.1% nitrogen gas (N₂), plants are unable to use this form of nitrogen. To compensate, modern agriculture has been highly reliant on industrial nitrogen fertilizers to achieve maximum crop productivity. However, a great deal of fossil fuel is required for the production and delivery of nitrogen fertilizer. Moreover, carbon dioxide (CO₂), which is released during fossil fuel combustion, contributes to the greenhouse effect, and run-off of nitrate leads to eutrophication of the waterways. Biological nitrogen fixation is an alternative to nitrogen fertilizer. It is carried out by prokaryotes using an enzyme complex called nitrogenase, and results in atmospheric N₂ being reduced into a form of nitrogen that diazotrophic organisms and plants are able to use. Ammonia is this process, and its major players, which will be discussed in this book. *Biological Nitrogen Fixation* is a comprehensive two-volume work bringing together both review and original research articles on key topics in nitrogen fixation. Chapters across both volumes emphasize molecular techniques and advanced biochemical analysis approaches applicable to various aspects of biological nitrogen fixation. Volume 1 explores the chemistry and biochemistry of nitrogenases, nif gene regulation, the taxonomy, evolution, and genomics of nitrogen-fixing organisms, as well as their physiology and metabolism. Volume 2 covers the symbiotic interaction of nitrogen-fixing organisms with their host plants, including nodulation and symbiotic nitrogen fixation, plant and microbial omics, cyanobacteria, diazotrophs, and non-legumes, field studies, and inoculum preparation, as well as nitrogen fixation and cereals. Covering the full breadth of current nitrogen fixation research and expanding it towards future advances in the field, *Biological Nitrogen Fixation* will be a one-stop reference for microbial ecologists and environmental microbiologists, as well as plant and agricultural researchers working on crop sustainability. **Journal of Economic Literature**, 2014 *101 Good Reasons to Believe* James D.

Sideras, 2018-01-04 This book presents a strong case for the Christian faith by using scientific evidence and philosophical reasoning. Although an abundance of Christian apologetic textbooks exist, most are not easily accessible because they offer long and scholarly treatments of subject matter that may not appeal to lay readers. This book differs in two ways. First, it presents the case for Christianity in a friendly, scholarly prose which enables readers to plainly understand each reason to believe. Second, these reasons are concisely structured so that within minutes, readers can quickly examine each argument in light of the evidence presented. *101 Good Reasons to Believe* is essential reading for theists who wish to strengthen their faith in God, and for nontheists who desire to critically investigate the truth claims of the Bible. This book includes topics such as astronomical evidence for the existence of God, evidence for creation and intelligent design, refutation of Darwinian evolution, the historicity of Jesus, why there is human suffering if God exists, the accuracy of the Bible, and evidence for heaven and hell. The 101 reasons presented make thought-provoking and compelling reading for scholars and non-scholars alike.
