and future climate predictions suggest that in some situations competition will be intensified with occurrence of increased abiotic e g water and nutrient limitations and biotic stresses e g mass outbreak of insects but competition might also decrease in situations where plant productivity and survival declines e g habitats with degraded soils Changing interactions climate change and biological invasions place new challenges on ecosystems Understanding processes and mechanisms that underlie the interactions between plants and environmental factors will aid predictions and intervention There is much need to develop strategies to secure ecosystem services via primary productivity and to prevent the continued loss of biodiversity This Research Topic provides an up to date account of knowledge on plant plant interactions with a focus on identifying the mechanisms underpinning competitive ability The Research Topic aims to showcase knowledge that links ecological relevance with physiological processes to better understanding plant and ecosystem function *The Works of Mary Robinson, Part II* William D Brewer, 2022-08-04 Regularly the subject of cartoonists and satirical novelists Mary Robinson achieved public notoriety as the mistress of the young Prince of Wales George IV Her association with figures such as William Godwin and Mary Wollstonecraft and comparisons with Charlotte Smith make her a serious figure for scholarly research
