Handbook On Computational Intelligence (In 2 Volumes) Plamen Parvanov Angelov, 2016-03-18 With the Internet the proliferation of Big Data and autonomous systems mankind has entered into an era of digital obesity In this century computational intelligence such as thinking machines have been brought forth to process complex human problems in a wide scope of areas from social sciences economics and biology medicine and social networks to cyber security The Handbook of Computational Intelligence in two volumes prompts readers to look at these problems from a non traditional angle It takes a step by step approach supported by case studies to explore the issues that have arisen in the process The Handbook covers many classic paradigms as well as recent achievements and future promising developments to solve some of these very complex problems Volume one explores the subjects of fuzzy logic and systems artificial neural networks and learning systems Volume two delves into evolutionary computation hybrid systems as well as the applications of computational intelligence in decision making the process industry robotics and autonomous systems This work is a one stop shop for beginners as well as an inspirational source for more advanced researchers It is a useful resource for lecturers and learners alike

Computational Intelligence - Volume I Hisao Ishibuchi, 2015-12-30 Computational intelligence is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Computational intelligence is a rapidly growing research field including a wide variety of problem solving techniques inspired by nature Traditionally computational intelligence consists of three major research areas Neural Networks Fuzzy Systems and Evolutionary Computation Neural networks are mathematical models inspired by brains Neural networks have massively parallel network structures with many neurons and weighted connections Whereas each neuron has a simple input output relation a neural network with many neurons can realize a highly non linear complicated mapping Connection weights between neurons can be adjusted in an automated manner by a learning algorithm to realize a non linear mapping required in a particular application task Fuzzy systems are mathematical models proposed to handle inherent fuzziness in natural language For example it is very difficult to mathematically define the meaning of cold in everyday conversations such as It is cold today and Can I have cold water The meaning of cold may be different in a different situation Even in the same situation a different person may have a different meaning Fuzzy systems offer a mathematical mechanism to handle inherent fuzziness in natural language As a result fuzzy systems have been successfully applied to real world problems by extracting linguistic knowledge from human experts in the form of fuzzy IF THEN rules Evolutionary computation includes various population based search algorithms inspired by evolution in nature Those algorithms usually have the following three mechanisms fitness evaluation to measure the quality of each solution selection to choose good solutions from the current population and variation operators to generate offspring from parents Evolutionary computation has high applicability to a wide range of optimization problems with different

characteristics since it does not need any explicit mathematical formulations of objective functions For example simulation based fitness evaluation is often used in evolutionary design Subjective fitness evaluation by a human user is also often used in evolutionary art and music These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers

Internet of Things and Analytics for Agriculture, Volume 3 Prasant Kumar Pattnaik,Raghvendra Kumar,Souvik Pal,2021-11-10 The book discusses one of the major challenges in agriculture which is delivery of cultivate produce to the end consumers with best possible price and quality Currently all over the world it is found that around 50% of the farm produce never reaches the end consumer due to wastage and suboptimal prices The authors present solutions to reduce the transport cost predictability of prices on the past data analytics and the current market conditions and number of middle hops and agents between the farmer and the end consumer using IoT based solutions Again

the demand by consumption of agricultural products could be predicted quantitatively however the variation of harvest and production by the change of farm s cultivated area weather change disease and insect damage etc could be difficult to be predicted so that the supply and demand of agricultural products has not been controlled properly To overcome this edited book designed the IoT based monitoring system to analyze crop environment and the method to improve the efficiency of decision making by analyzing harvest statistics The book is also useful for academicians working in the areas of climate changes Meeting Handbook Linguistic Society of America,2003 Crime and Punishment in the Future Internet Sanja Milivojevic,2021-04-21 Crime and Punishment in the Future Internet is an examination of the development and impact of digital frontier technologies DFTs such as Artificial Intelligence the Internet of things autonomous mobile robots and blockchain on offending crime control the criminal justice system and the discipline of criminology It poses criminological legal ethical and policy questions linked to such development and anticipates the impact of DFTs on crime and offending It forestalls their wide ranging consequences including the proliferation of new types of vulnerability policing and other mechanisms of social control and the threat of pervasive and intrusive surveillance Two key concerns lie at the heart of this volume First the book investigates the origins and development of emerging DFTs and their interactions with criminal behaviour crime prevention victimisation and crime control It also investigates the future advances and likely impact of such processes on a range of social actors citizens non citizens offenders victims of crime judiciary and law enforcement media NGOs This book does not adopt technological determinism that suggests technology alone drives social development Yet while it is impossible to know where the emerging technologies are taking us there is no doubt that DFTs will shape the way we engage with and experience criminal behaviour in the twenty first century As such this book starts the conversation about a range of essential topics that this expansion brings to social sciences and begins to decipher challenges we will be facing in the future An accessible and compelling read this book will appeal to those engaged with criminology sociology politics policymaking and all those interested in the impact of DFTs on the criminal justice system *Information Sources in Engineering* Roderick A.
