Oncogenes An Introduction To The Concept Of Cancer Genes:

Oncogenes Kathy B. Burck, Edison T. Liu, James W. Larrick, 2012-12-06 Cancer viruses have played a paradoxical role in the history of cancer research Discovered in 1911 by Peyton Rous 1 at the Rockefeller Institute they were largely ignored for several decades Witness his eventual recognition for a Nobel Prize but not until 1966 setting an all time record for latency and testimony to one more advantage of longevity In the 1950s another Rockefeller Nobelist Wendell Stanley spearheaded a campaign to focus attention on viruses as etiological agents in cancer his plat form having been the chemical characterization of the tobacco mosaic virus as a pure protein correction ribonucleoprotein in 1935 2 This doctrine was a centerpiece of the U S National Cancer Crusade of 1971 if human cancers were caused by viruses the central task was to isolate them and prepare vaccines for immunization At that point many observers felt that perhaps too much attention was being devoted to cancer viruses It was problematic whether viruses played an etiological role in more than a handful of human cancers

Oncogenes Kathy B Burck, Edison T Liu, James W Larrick, 1988-05-17 Introduction to Oncogenes and Molecular Cancer Medicine Dennis W. Ross, 2012-12-06 Providing the physician with a solid understanding of molecular biology and its applications for the diagnosis and treatment of cancer this book reviews the basic molecular and other principles of cancer medicine including controls of cell growth and senescence carcinogenesis tumorigenesis and epidemiology The second part of the book gives clinical examples to demonstrate the basic science principles including chapters on leukaemia colon cancer and breast cancer A chapter on molecular diagnostics and screening plus a chapter on new molecular anti cancer therapies allow readers an insight into current therapies as well as the future of molecular cancer medicine A useful glossary defines new terminology at a glance Written in a user friendly conversational format this text will be welcomed by all physicians eager to sharpen their own understanding of molecular cancer medicine as well as to help them provide patients with balanced information on the advances and limitations of current treatment options From Demons and Evil Spirits to Cancer Genes Patrick J. Toxicologic Pathology Wanda M. Haschek, Colin G. Rousseaux, Matthew A. Wallig, Brad Bolon, Ricardo Ochoa, 2001-10-16 A comprehensive understanding of toxicologic pathology is essential for those in industry academia and government who make decisions concerning the safety and efficacy of drugs and chemicals Toxicologic pathology relies heavily on the fields of both toxicology and pathology which are well covered individually in various texts and references however there are few texts that address the field of toxicologic pathology The Handbook of Toxicologic Pathology fills this void and is thus essential for all health professionals within or interacting with the field of toxicologic pathology This two volume set provides the reader with a single reference for toxicologic pathology In volume I the book covers toxicologic pathology in its basic aspects including its definition the basic biochemical and morphologic mechanisms underlying the discipline the basic practice of toxicologic pathology including special techniques and issues essential to the understanding of toxicologic pathology such as risk

assessment experimental design and statistical analysis Next the book moves to specific issues affecting the practice toxicologic pathology including issues such as knowledge management regulatory affairs and writing pathology reports Finally Volume I closes with several chapters that deal with specific classes of environmental toxicants such as endocrine disruptors and heavy metals Volume II addresses the toxicologic pathology in a thoroughly standardized systems manner addressing the basic structure and function of a particular organ system its response to toxic injury mechanisms of injury and methods of evaluation of such injury Key Features Easy to find up to date reference information Graphic and photographic plates Current hot topics and anticipated changes in toxicologic pathology Standardized chapter format Topics that are addressed in both a broad and deep manner resulting in a stand alone text Added coverage of important environmental toxicants Chapters authored by internationally recognized experts and peer reviewed

Regulatory Mechanisms in Breast Cancer Marc E. Lippman, Robert B. Dickson, 2012-12-06 In Breast Cancer Cellular and Molecular Biology Kluwer Academic Publishers 1988 we tried to present an introduction to the emerging basic studies on steroid receptors oncogenes and growth factors in the regulation of normal and malignant mammary epithelium The response to this volume was superb indicating a tremendous interest in basic growth regulatory mechanisms governing breast cancer and controlling its malignant progression In the two years since its publication much new and exciting information has been published and the full interplay of regulatory mechanisms is now beginning to emerge We have divided this book into four sections that we hope will unify important concepts and help to crystallize areas of consensus and or disagreement among a diverse group of basic and clinical scientists working on the disease The first section is devoted to studies on oncogenes antioncogenes proliferation and tumor prognosis The first chapter by Sunderland and McGuire introduces the characteristics of breast cancer as studied by pathologists to establish prognostic outcome Of particular interest is a new proto oncogene called HER 2 or neu which is rapidly becoming accepted as a valuable new tumor marker of poor prognosis The second chapter by Lee Bookstein and Lee introduces the best known antioncogene the retinoblastoma antioncogene whose expression is sometimes lost in breast cancer Malignant progression appears to be influenced by the balance of proto oncogene and antioncogene expression

Oncogenes and Tumor Suppressor Genes in Human Malignancies Christopher Benz, E.T. Liu, 2012-12-06 The first edition of Oncogenes 1989 focused on several of the better known transforming mechanisms and surveyed a spectrum of solid tumors and hematologic malignancies Several of the nearly 50 known oncogenes most relevant to human disease were examined In contrast this volume presents a very different profile and balance of subject material that reflects the rapidly changing field of molecular oncology and its newly emerging concepts Among the most important discoveries of the past 4 years are the identification of nearly a dozen different tumor suppressor genes and the finding of an entirely new class of cancer causing gene bcl 2 that acts by inhibiting cell death rather than stimulating cell proliferation This edition begins by reviewing selected malignancies in which our earlier search for clinically relevant oncogenes has led

to more focused studies on gain of function and loss of function genetic abnormalities as well as autocrine and paracrine growth factor loops known to regulate tumor physiology and malignant cell behavior Curiously many of these genetic and functional abnormalities are shared by several different tumor types and are not uniformly present in all tumors of the same type This observation brings up molecular questions about the tissue specific determinants that underlie individual cancers and also gives added impetus to the suggestion that molecular abnormalities referred to as tumor markers be included among the histopathologic features used for clinical diagnosis and management

The Oncogene and Tumour Suppressor Gene Factsbook Robin Hesketh, 1997-07-11 The Second Edition of The Oncogene and Tumour Suppressor Gene FactsBook has been completely revised updated and expanded by 60% The book contains more than 80 entries on oncogenes including JUN MYC and RAS as well as DNA tumour viruses tumour suppressor genes including p53 retinoblastoma BRCA1 BRCA2 VHL F2FL and essential material on angiogenesis and metastasis apoptosis cell cycle control and gene therapy Includes much new data on this fast moving field including newly discovered oncogenes Summarizes the clinical association and molecular properties of all known oncogenes and tumor suppression genes Contains more than 2000 terms for reference and further research Revised to include signaling pathways apoptosis and metastasis

Clinical and Experimental Pathology of Lung Cancer J. Gordon McVie, W. Bakker, S. Sc. Wagenaar, D. Carney, 2012-12-06 J G MCVIE The impact of therapy on one subset of lung cancer the small cell type has been significant and lasting The reality of cure for even a fraction of patients with this disease has caused reverberations in the pathology lab where the responsibility and challenge of diagnosis of this vital sub group lies No less dramatic has been the discovery that the cell types of lung cancer have recognisable growth characteristics in serum free culture they are recognisable by patterns of markers and some produce growth factors which autoregulate their eventual fate Many of the discoveries from the biological studies have impacted on the pathologist in the form of disturbing evidence for a single stem cell origin for all the cell types of lung cancer and in the shape of new facilitation in diagnosis by application of immunoperoxidase techniques Monoclonal antibodies raised against oncogene products growth factor receptor sites bystander cell membrane proteins can all be applied to cytology specimens and frozen or paraffin fixed tissue sections to aid diagnosis and some can be used in sequential serum assay to monitor therapy and predict prognosis Adding to these extraordinary tools the sophistication of electron microscopy and immunoelectron microscopy new techniques for preparation of tissue and novel methods for studying vital cells in kinesis you sense the flavour of the future of lung cancer which is captured in this book
