Ambient Intelligence Giuseppe Riva, 2005 The metaphor of Ambient Intelligence AmI tries to picture a vision of the future where all of us will be surrounded by intelligent electronic environments and this ambient has claims to being sensitive and responsive to our needs Ambient Intelligence without invasion of privacy represents a long term vision for the EU Information Society Technologies Research programme A strong multi disciplinary and collaborative approach is a key requirement for large scale technology innovation and the development of effective applications Up to now most of the books and papers related to AmI focus their analysis on the technology potential only An important feature of this volume is the link between the technology through the concepts of ubiquitous computing and intelligent interface and the human experience of interacting in the world through a neuro psychological vision centred on the concept of presence Presence the sense of being there is the experience of projecting one's mind through media to other places people and designed environments The combination of recent discoveries in cognitive neuroscience which make it possible to acquire a better understanding of the human aspects of presence and the breakthroughs at the level of the enabling technologies make it increasingly possible to build novel systems based on this understanding The goal of this volume is to assess the technologies and processes that are behind the AmI vision in order to help the development of state of the art applications More in detail this volume aims at supporting researchers and scientists interested in the understanding and exploiting the potential of AmI

Machine Vision Fabio Solari, Manuela Chessa, Silvio P. Sabatini, 2012-03-23 Vision plays a fundamental role for living beings by allowing them to interact with the environment in an effective and efficient way The ultimate goal of Machine Vision is to endow artificial systems with adequate capabilities to cope with not a priori predetermined situations To this end we have to take into account the computing constraints of the hosting architectures and the specifications of the tasks to be accomplished to continuously adapt and optimize the visual processing techniques Nevertheless by exploiting the low cost computational power of off the shelf computing devices Machine Vision is not limited any more to industrial environments where situations and tasks are simplified and very specific

but it is now pervasive to support system solutions of everyday life problems

Explainable Artificial Intelligence for Intelligent Transportation Systems Amina Adadi, Afaf Bouhoue, 2023-10-20 Artificial Intelligence AI and Machine Learning ML are set to revolutionize all industries and the Intelligent Transportation Systems ITS field is no exception While ML especially deep learning models achieve great performance in terms of accuracy the outcomes provided are not amenable to human scrutiny and can hardly be explained This can be very problematic especially for systems of a safety critical nature such as transportation systems Explainable AI XAI methods have been proposed to tackle this issue by producing human interpretable representations of machine learning models while maintaining performance These methods hold the potential to increase public acceptance and trust in AI based ITS FEATURES Provides the necessary background for newcomers to the field both academics and interested practitioners Presents a timely snapshot of explainable and interpretable models in ITS applications Discusses ethical societal and legal implications of adopting XAI in the context of ITS Identifies future research directions and open problems
