Storage Systems Alexander Thomasian, 2021-10-13 Storage Systems: Organization, Performance, Coding, Reliability, and Their Data Processing was motivated by the 1988 Redundant Array of Inexpensive Independent Disks proposal to replace large form factor mainframe disks with an array of commodity disks. Disk loads are balanced by striping data into strips with one strip per disk, and storage reliability is enhanced via replication or erasure coding, which at best dedicates k strips per stripe to tolerate k disk failures. Flash memories have resulted in a paradigm shift with Solid State Drives (SSDs) replacing Hard Disk Drives (HDDs) for high performance applications. RAID and Flash have resulted in the emergence of new storage companies, namely EMC, NetApp, SanDisk, and PureStorage, and a multibillion-dollar storage market. Key new conferences and publications are reviewed in this book. The goal of the book is to expose students, researchers, and IT professionals to the more important developments in storage systems while covering the evolution of storage technologies, traditional and novel databases, and novel sources of data. We describe several prototypes: FAWN at CMU, RAMCloud at Stanford, and Lightstore at MIT. Oracle's Exadata, AWS Aurora, Alibaba's PolarDB, Fungible Data Center, and author's paper designs for cloud storage, namely heterogeneous disk arrays and hierarchical RAID, are surveyed. Storage technologies and lists sources of data measurements (text, audio, images, and video) are familiarized with paradigms to improve performance: caching, prefetching, log-structured file systems, and merge trees. LSMs describe RAID organizations and analyze their performance and reliability. Storage is conserved via data compression, deduplication, compaction, and secured data via encryption. Specifications of storage technologies on performance and power consumption exemplify database parallelism for big data analytics, deep learning via multicore CPUs, GPUs, FPGAs, and ASICs, e.g., Google's Tensor Processing Units.
