Changing Face of Information: Support Services for Scientific Research David J. Brown, 2020-01-20 The health of scientific enterprise has become a critical political and social issue as nation states tackle austerity diversity global challenges whilst simultaneously supporting a competitive and innovative national economy A key asset in achieving such ambitions is for a scholarly information system which enables the fruits of the research effort to be disseminated efficiently As the information support system struggles with adapting from a print based to a digital process the dysfunctionality current within STEM publishing in particular becomes evident New ways of supporting research are emerging which require a new approach to publishing an approach which takes

on board the many demographic social technical and administrative changes taking place in both science itself and society A radical strategic assessment is required and this book tracks key aspects required for any new future strategy This book provides a catalogue of issues to which a future STEM information industry will need to adapt They range from the effects of technology on the neurological processes of research to the growing use of technology to speed up the exchange of information among groups and collaboratories from considerations about quality control yet maintaining intellectual ownership from changing from an elitist STEM system favouring academics to a more democratic process with wider appeal There is the neglected non academic market and its need to share in the results of the research effort often through partnership and being part of a hive mind This is the large world of the unaffiliated knowledge workers of which academia is numerically but a small part The many changes taking place in scholarly information dictate that the future is unlikely to be a smooth and gradual evolution from the past Radical new approaches are required a revolution which takes on board the perfect storm of changes listed in this book Just as such changes have changed the face of industries such as music and retail in recent years so similar dramatic changes are likely to result in a restructuring of STEM into a more technologically focused industry within the next decade The implications for the current STEM stakeholders are profound

robust and dependable outcomes Quality disciplines have been widely used for decades in industrial and business fields building a knowledge base that can be translated and exploited much to the advantage of scientific research However quality references in scientific research are still extremely rare and largely limited to an international guideline and a few sector specific standards Despite WHO and EU Commission campaigns there are still precious few practical texts that offer researchers guidance on quality principles and provide simple tools and methodologies for their daily work The book starting from the problem of the reproducibility of scientific results and the substantial contribution that the Quality approach can make to research Chapter 1 introduces the reader to key principles and basic concepts of Quality and illustrates both general and research specific quality standards paving the way for further discussion Chapter 2 In turn Chapter 3 presents detailed applications of Quality principles in various aspects of research from study and ethics to materials and equipment management Chapters 4 and 5 respectively are devoted to Quality tools and Quality methodologies as well as soft skills all of which are valuable to scientific experimentation and study management The concepts and practical tools discussed are extensively illustrated with examples from actual applications in scientific research
