Major Histocompatibility Complex (MHC) in Health and Disease Jerzy K. Kulski, Takashi Shiina, Johannes M.

Dijkstra, 2020-01-15 The major histocompatibility complex MHC is a highly polymorphic and diverse multigene locus in all jawed vertebrate species that has an integral role in adaptive innate immune systems transplantation and infectious and autoimmune diseases The MHC supra locus in mammalian vertebrates is usually partitioned into three distinct regions known as classes I II and III which to varying extents can be found conserved in nonmammalian jawed vertebrates such as bony fish amphibians and bird lineages The MHC gene region is characterized particularly by the expression of class I and class II glycoproteins that bind peptides derived from intracellular or extracellular antigens to circulating T cells While this expressed antigenic specificity remains the predominant interest with respect to MHC function and polymorphism in a population a broader concept has emerged that examines the MHC as a multifunctional polymorphic controller that facilitates and regulates genome diversity with a much greater array of functions and effects than just MHC restricted antigen recognition This volume of 19 reprints presented by various experts and collected from the Special Issue of Cells on MHC in Health and Disease covers a broad range of topics on the genomic diversity of the MHC regulatory system in various vertebrate species including MHC class I II and III genes innate and adaptive immunity neurology transplantation haplotypes infectious and autoimmune diseases fecundity conservation allelic lineages and evolution Taken together these articles demonstrate the immense complexity and diversity of the MHC structure and function within and between different vertebrate species

Emerging Contaminants Handbook Caitlin H. Bell, Margaret Gentile, Erica Kalve, Ian Ross, John

Horst, Suthan Suthersan, 2019-01-15 The term emerging contaminants and its multiple variants has come to refer to unregulated compounds discovered in the environment that are also found to represent a potential threat to human and ecological receptors Such contaminants create unique and considerable challenges as the push to address them typically outpaces the understanding of their toxicity their need for regulation their occurrence and techniques for treating the environmental media they affect With these challenges in mind this handbook serves as a primer regarding the topic of emerging contaminants with current and practical information to help support the goal of protection where they are encountered Features Explores the definition identification and life cycle of emerging contaminants Reviews current information on sources toxicology regulation and new tools for characterization and treatment of 1 4 Dioxane mature in its emerging contaminant life cycle Per and polyfluoroalkyl substances PFASs a newer group of emerging contaminant Hexavalent chromium former emerging contaminant with evolving science 1 2 3 Trichloropropane progressing in its emerging contaminant life cycle Provides thoughts on opportunities in managing emerging contaminants to help balance uncertainty compress life cycle and optimize outcomes

Hydrothermal microbial ecosystems Andreas Teske,

Anna-Louise Reysenbach, 2015-11-24 The papers in the Hydrothermal Vent e book cover a range of microbiological research

in deep and shallow hydrothermal environments from high temperature black smokers to diffuse flow habitats and episodically discharging subsurface fluids to the hydrothermal plumes Together they provide a snapshot of current research interests in a field that has evolved rapidly since the discovery of hydrothermal vents in 1977 Hydrothermally influenced microbial habitats and communities represent a wide spectrum of geological setting chemical in situ regimes and biotic communities the classical examples of basalt hosted black smoker chimneys at active mid ocean spreading centers have been augmented by hydrothermally heated and chemically altered sediments microbiota fueled by serpentinization reactions and low temperature vents with unusual menus of electron donors Environmental gradients and niches provide habitats for unusual or unprecedented microorganisms and microbial ecosystems The discovery of novel extremophiles underscores untapped microbial diversity in hydrothermal vent microbial communities Different stages of hydrothermal activity from early onset to peak activity gradual decline and persistence of cold and fossil vent sites correspond to different colonization waves by microorganisms as well as megafauna Perhaps no other field in microbiology is so intertwined with the geological and geochemical evolution of the oceans and promises so many biochemical and physiological discoveries still to be made within the unexhausted richness of extreme microbial life

Samuel A. Cushman, Rongling Wu, Rosane Garcia Collevatti, 2023-07-27 Phage Therapy: Past, Present and Future Stephen T. Abedon, Pilar García, Peter Mullan, Rustam Aminov, 2017-09-05 Historically the first observation of a transmissible lytic agent that is specifically active against a bacterium *Bacillus anthracis* was by a Russian microbiologist Nikolay Gamaleya in 1898 At that time however it was too early to make a connection to another discovery made by Dmitri Ivanovsky in 1892 and Martinus Beijerinck in 1898 on a non bacterial pathogen infecting tobacco plants Thus the viral world was discovered in two of the three domains of life and our current understanding is that viruses represent the most abundant biological entities on the planet The potential of bacteriophages for infection treatment have been recognized after the discoveries by Frederick Twort and Felix d H relle in 1915 and 1917 Subsequent phage therapy developments however have been overshadowed by the remarkable success of antibiotics in infection control and treatment and phage therapy research and development persisted mostly in the former Soviet Union countries Russia and Georgia as well as in France and Poland The dramatic rise of antibiotic resistance and especially of multi drug resistance among human and animal bacterial pathogens however challenged the position of antibiotics as a single most important pillar for infection control and treatment Thus there is a renewed interest in phage therapy as a possible additive alternative therapy especially for the infections that resist routine antibiotic treatment The basis for the revival of phage therapy is affected by a number of issues that need to be resolved before it can enter the arena which is traditionally reserved for antibiotics Probably the most important is the regulatory issue How should phage therapy be regulated Similarly to drugs Then the co evolving nature of phage bacterial host relationship will be a major hurdle for the production of consistent phage formulae Or should we resort to the phage

products such as lysins and the corresponding engineered versions in order to have accurate and consistent delivery doses We still have very limited knowledge about the pharmacodynamics of phage therapy More data obtained in animal models are necessary to evaluate the phage therapy efficiency compared for example to antibiotics Another aspect is the safety of phage therapy How do phages interact with the immune system and to what costs or benefits What are the risks in the course of phage therapy of transduction of undesirable properties such as virulence or antibiotic resistance genes How frequent is the development of bacterial host resistance during phage therapy Understanding these and many other aspects of phage therapy basic and applied is the main subject of this Topic
