Inventorying Cultural Heritage Collections Sandra Vanderwarf, Bethany Romanowski, 2022-03-14 This two part text opens with an argument few collections practitioners would contest Regular inventories are central to meaningful sustainable and ethical collections preservation and access But Vanderwarf and Romanowski argue that in practice some 25 years working with diverse collections between them inventories are uncommon instead of functioning as a commonplace feature of collections care they tend to be evoked as a last resort when a museum has lost control of its collection Part I offers a flexible project management framework that illustrates strategies for reining in control of collections now From identifying objectives that best serve the collection in question to securing stakeholder support and planning time and resources Part I eliminates some guesswork around what may be an unprecedented and intensive project To maintain the benefits of a project style inventory the authors then encourage practitioners to embrace inventory as an ongoing evolving collections care function that reflects changing professional values and expectations from the communities museums serve By centering computerized databases barcoding and digital collections the authors further acknowledge these technologies as permanent evolving features of collections and inventory practice that merit increased resourcing Part II gives voice to practitioners around the world through case studies that affirm the vital role of inventories

in regaining control of collections Some of these inventories occurred during the course of everyday work while others were responses to natural disasters and armed conflict Still others may be seen as expressions of social justice As much as the authors offer a guide to performing inventories thereby filling a longstanding gap in the literature they invite cultural heritage institutions to rethink how the stories held in collections can be better told and preserved through enhanced inventory practice The book will benefit seasoned museum collections practitioners as well as those who lack access to formal museology education and training The book targets stewards of cultural heritage and material culture collections with varying resources

COMPUTATIONAL INTELLIGENCE IN COMPLEX DECISION MAKING SYSTEMS Ruan Da, 2010-06-01 In recent years there has been a growing interest in the need for designing intelligent systems to address complex decision systems One of the most challenging issues for the intelligent system is to effectively handle real world uncertainties that cannot be eliminated These uncertainties include various types of information that are incomplete imprecise fragmentary not fully reliable vague contradictory deficient and overloading The uncertainties result in a lack of the full and precise knowledge of the decision system including the determining and selection of evaluation criteria alternatives weights assignment scores and the final integrated decision result Computational intelligent techniques including fuzzy logic neural networks and genetic algorithms etc which are complimentary to the existing traditional techniques have shown great potential to solve these demanding real world decision problems that exist in uncertain and unpredictable environments These technologies have formed the foundation for intelligent systems

Water Management Challenges in Global Change B. Ulanicki, Kalanithy Vairavamoorthy, David Butler, Peter L. M. Bounds, Fayyaz Ali Memon, 2020-11-26 *Water Management Challenges in Global Change* contains the proceedings of the 9th Computing and Control for the Water Industry (CCWI2007) and the Sustainable Urban Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computer-based methods. Issues such as economic globalisation, climate changes, and water shortages call for a new approach to water systems management which addresses the relevant technical, social, and economic aspects. This collection represents the views of academic and industrial experts from a number of countries who provide technical solutions to current water management problems and present a

vision for addressing the global questions The themes underlying many of the contributions include energy and material savings water savings and the integration of different aspects of water management The papers are grouped into three themes covering water distribution systems sustainable urban water management and modelling of wastewater treatment plants The water distribution topics cover asset and information management planning monitoring and control hydraulic modelling of steady state and transients water quality and treatment demand and leakage management optimisation design and decision support systems as well as reliability and security of water distribution systems The sustainable urban water management topics include urban drainage systems water reuse social aspects of water management and also selected facets of water resources and irrigation Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems To address this imbalance this book presents a number of modelling techniques developed specifically for these plants Water Management Challenges in Global Change will prove to be invaluable to water and environmental engineering researchers and academics managers engineers and planners and postgraduate students **Entrepreneurship**

Software Process Improvement: Metrics, Measurement, and Process Modelling Michael Haug, Eric W. Olsen, Lars Bergman, 2011-06-28 C Amting Directorate General Information Society European Commission Brussels Under the 4th

Framework of European Research the European Systems and Software Initiative ESSI was part of the ESPRIT Programme. This initiative funded more than 470 projects in the area of software and system process improvements. The majority of these projects were process improvement experiments carrying out and taking up new development processes, methods and technology within the software development process of a company. In addition, nodes, centres of expertise, European networks, organisations managing local activities, training and dissemination actions complemented the process improvement experiments. ESSI aimed at improving the software development capabilities of European enterprises. It focused on best practice and helped European companies to develop world class skills and associated technologies to build the increasingly complex and varied systems needed to compete in the marketplace. The dissemination activities were designed to build a forum at European level to exchange information and knowledge gained within process improvement experiments. Their major objective was to spread the message and the results of experiments to a wider audience through a variety of different channels. The European Experience Exchange UR X project has been one of these dissemination activities within the European Systems and Software Initiative. UR X has collected the results of practitioner reports from numerous workshops in Europe and presents in this series of books the results of Best Practice achievements in European Companies over the last few years.
