Portugali,2006-01-19 Juval Portugali The notion of complex artificial environments CAE refers to theories of complexity and self organization as well as to artifacts in general and to artificial environments such as cities in particular The link between the two however is not trivial For one thing the theories of complexity and self organization originated in the hard science and by reference to natural phenomena in physics and biology The study of artifacts per contra has traditionally been the business of the soft disciplines in the humanities and social sciences The notion of complex artificial environments thus implies the supposition that the theories of complexity and self organization together with the mathematical formalisms and methodologies developed for their study apply beyond the domain of nature Such a supposition raises a whole set of questions relating to

the nature of 21 century cities and urbanism to philosophical issues regarding the natural versus the artificial to the methodological legitimacy of interdisciplinary transfer of theories and methodologies and to the implications that entail the use of sophisticated state of the art artifacts such as virtual reality VR cities and environments The three day workshop on the study of complex artificial environments that took place on the island of San Servolo Venice during April 1-3 2004 was a gathering of scholars engaged in the study of the various aspects of CAE
