Design Principles for Interactive Software Gilbert Cockton, Christian Gram, 2013-04-17 IFIP's Working Group 2.7.13.4 has since its establishment in 1974 concentrated on the software problems of user interfaces From its original interest in operating systems interfaces the group has gradually shifted emphasis towards the development of interactive systems The group has

organized a number of international working conferences on interactive software technology the proceedings of which have contributed to the accumulated knowledge in the field The current title of the Working Group is User Interface Engineering with the aim of investigating the nature concepts and construction of user interfaces for software systems The scope of work involved is to increase understanding of the development of interactive systems to provide a framework for reasoning about interactive systems to provide engineering models for their development This report addresses all three aspects of the scope as further described below In 1986 the working group published a report Beech 1986 with an object oriented reference model for describing the components of operating systems interfaces The model was implementation oriented and built on an object concept and the notion of interaction as consisting of commands and responses Through working with that model the group addressed a number of issues such as multi media and multi modal interfaces customizable interfaces and history logging However a conclusion was reached that many software design considerations and principles are independent of implementation models but do depend on the nature of the interaction process TPACK: Breakthroughs in Research and Practice Management Association, Information Resources, 2019-02-01 Educational technologies are becoming commonplace entities in classrooms as they provide more options and support for teachers and students However many teachers are finding these technologies difficult to use due to a lack of training and instruction on how to effectively apply them to the classroom TPACK Breakthroughs in Research and Practice is an authoritative reference source for the latest research on the integration of technological knowledge pedagogical knowledge and content knowledge in the contexts of K 12 education Highlighting a range of pertinent topics such as pedagogical strategies blended learning and technology integration this publication is an ideal resource for educators instructional designers administrators academicians and teacher education programs seeking current findings on the implementation of technology in instructional design **Business Intelligence in Microsoft SharePoint 2013** Norm Warren, Mariano Neto, Stacia Misner, Ivan Sanders, Scott A.
