Microformats Empowering Your Markup For Web 2.0:

Microformats John Allsopp, 2007-04-29 Microformats burst onto the scene a couple of years ago and are fast becoming an essential tool for all professional web designers and developers. Imagine being able to integrate all of your web based contact details, tagged articles and geographical information seamlessly in web and desktop applications without having to add anything extra to your websites except a little specialized HTML markup. Microformats provide a more formalized technology for adding commonly used semantics such as contact details, location and reviews to today's Web. Unlike XML or the semantic Web, microformats use ubiquitous technologies like HTML and XHTML, existing developer skills and current web tools and perhaps most important, they work in all of today's web browsers. This book is a comprehensive guide to microformats. It explores why, in Bill Gates' words, "We need microformats," how microformats work and the kinds of problems microformats help solve. The book covers every current microformat with complete details of the syntax, semantics and uses of each, along with real world examples and a comprehensive survey of the tools available for working with them. The book also features case studies detailing how major web content publishers such as Yahoo! put microformats to work in their web applications. Written by one of the Web's best known educators, John Allsopp, *Microformats Empowering Your Markup for Web 2.0* will help you painlessly get up to speed with this exciting technology. [Semantic Web Technologies and Legal Scholarly Publishing](#) Silvio Peroni, 2014-06-20 This work deals with the applications of Semantic Publishing technologies in the legal domain, i.e. the use of Semantic Web technologies to address issues related to the Legal Scholarly Publishing. Research in the field of Law has a long tradition in the application of semantic technologies such as Semantic Web and Linked Data to real world scenarios. This book investigates and proposes solutions for three main issues that Semantic Publishing needs to address within the context of the Legal Scholarly Publishing: the need of tools for linking document text to a formal representation of its meaning; the lack of complete metadata schemas for describing documents according to the publishing vocabulary; and the absence of effective tools and user interfaces for easily acting on semantic publishing models and theories. In particular, this work introduces EARMARK, a

markup meta language that allows one to create markup documents without the structural and semantic limits imposed by markup languages such as XML EARMARK is a platform to link the content layer of a document with its intended formal semantics and it can be used with the Semantic Publishing and Referencing SPAR Ontologies another topic in this book SPAR Ontologies are a collection of formal models providing an upper semantic layer for describing the publishing domain Using EARMARK as a foundation for SPAR descriptions opens up to a semantic characterisation of all the aspects of a document and of its parts Finally four user friendly tools are introduced LOD E KC Viz Graffoo and Gaffe They were expressly developed to facilitate the interaction of publishers and domain experts with Semantic Publishing technologies by shielding such users from the underlying formalisms and semantic models of such technologies
