Biological Motion Janina Wellmann, 2024-02-06 A captivating exploration of the changing definitions of life in biology. Biological Motion studies the foundational relationship between motion and life. To answer the question 'What is Life?' prize-winning historian of science Janina Wellmann engages in a transdisciplinary investigation of motion as the most profound definition of living existence. For decades, information and structure have dominated the historiography of the life sciences with its prevailing focus on DNA structure and function. Now more than ever, motion is a crucial theme of basic biological research. Tracing motion from Aristotle's animal soul to molecular motors and from medical soft robotics to mathematical analysis, Wellmann locates biological motion at the intersection of knowledge domains and scientific and cultural practices. She offers signposts to mark the sites where researchers' technologies, ideas and practices opened up new paths in the constitution of the phenomenon of motion. An ambitious rethinking of the life sciences. Biological Motion uncovers the secret life of movement and offers a new account of what it means to be alive. *The New Orleans Medical and Surgical Journal*, 1851

Science, Politics and Business in the Work of Sir John Lubbock Mark Patton, 2016-04-01 Sir John Lubbock 1834-1913, first Lord Avebury, was a leading figure in the scientific, political and economic world of Victorian Britain, and his life provides an illuminating case study into the ways that these different facets were interlinked during the nineteenth century. Born into a Kent banking family, Lubbock's education was greatly influenced by his neighbour Charles Darwin, and after the publication of *The Origin of Species* he was one of his most vocal supporters. A pioneer of both entomology and archaeology and a successful author, Lubbock also ran the family bank from 1865 until his death in 1913 and served as a Liberal MP from 1870 until his ennoblement in 1900. In all these roles he proved extremely successful, but it is the inter-relationships between science, politics and business that forms the core of this book. In particular, it explores the way in which Lubbock acted as a link between the scientific worlds of Darwin, Huxley and Tyndall, the political world of Gladstone and Chamberlain, and the business world of Edison and Carnegie. By tying these threads together, this study shows the important role Lubbock played in defining and popularising the Victorian ideal of progress and its relationship to society, culture and Empire.
