Jennifer Duffy,Carol M. Cram,2005-10-03 Designed with the medical profession in mind covers introductory Word skills that a medical assisting nursing or allied health student will need for office support in a clinic or hospital *The Vocabulary of Medical English* Renáta Panocová,2017-08-21 The question of characterizing academic vocabulary has often been framed in a context that is purely determined by questions of language teaching The aim in such approaches is to come up with a list of words for learners of English for Special Purposes This book approaches this question from a more general empirical perspective focusing on medical vocabulary Its main contention is that the characterization of medical vocabulary is much more complex than is suggested by a simple list In a list a threshold determines the borderline on a one dimensional scale between what counts as medical vocabulary and what fails to qualify as such In analysing how such lists have been produced and how the cut off point has been determined the book shows a number of factors that have to be taken into account It uses a comparison of two corpora to demonstrate the extent to which text type determines the outcome of frequency calculations On the basis of such observations it argues for a new methodology for the calculation of the degree of medicalness of lexemes
