Empowering People Through Information Security Education** Lynette Drevin, Wai Sze Leung, Suné von Solms, 2025-07-25 This book constitutes the refereed proceedings of the 17th IFIP WG 11.8 World Conference on Information Security Education WISE 2025 held in Maribor, Slovenia during May 21-23, 2025. The 13 full papers presented were carefully reviewed and selected from 30 submissions. The papers are organized in the following topical sections: Workforce and Curriculum Development; Curriculum and Research Development; Gamification in Cybersecurity Education; Innovative Approaches to Cybersecurity Awareness; Papers Invited from SEC and Discussions. *Cyber-physical Systems* Pedro H. J. Nardelli, 2022-05-04 CYBER PHYSICAL SYSTEMS Provides a unique general theory of cyber physical systems focusing on how physical data and decision processes are articulated as a complex whole. Cyber physical systems CPS operate in complex environments, systems with integrated physical and computational capabilities. With the ability to interact with humans through a variety of modalities, cyber physical systems are applied across areas such as Internet of Things (IoT) enabled devices, smart grids, autonomous automotive systems, medical monitoring, and distributed robotics. Existing engineering methods are capable of solving technical problems, yet the deployment of CPS in a net-enabled society requires a general theory of cyber physical systems that goes beyond specific study cases and their associated technological development. Cyber physical Systems Theory: Methodology and Applications is a unique theoretical methodological guide to assessing systems where complex information processing defines the behavior of physical processes. Using a systematic approach, the book describes the fundamentals of cybernetics, complexity sciences, system engineering, concepts of data and information, the data dissemination process, graph theory, and more. Readers are provided with the general theory, methodological framework, and analytical tools to assess and design CPS for applications in transport, energy, communication, health care, the military, and industry. Provides a framework for measuring the performance of different cyber physical systems and assessing the potential impact of various cyber threats. Proposes a theory of CPS comprised of autonomous but interdependent physical data and regulatory layers. Discusses decision-making approaches rooted in probability theory, information theory, complexity sciences, and game theory. Helps readers perform a systemic impact evaluation of trending topics such as Artificial Intelligence, 5G.

 Lyudmila Sukhostat,2022-11-15 Although cybersecurity is something of a latecomer on the computer science and
 engineering scene there are now inclinations to consider cybersecurity a meta discipline Unlike traditional information and
 communication systems the priority goal of the cybersecurity of cyber physical systems is the provision of stable and reliable
 operation for the critical infrastructures of all fundamental societal functions and activities This book Cybersecurity for
 Critical Infrastructure Protection via Reflection of Industrial Control Systems presents the 28 papers delivered at the NATO
 Advanced Research Workshop ARW hosted in Baku Azerbaijan and held online from 27 29 October 2021 The inspiration and
 motivation behind the ARW stem from the growth in large scale cyber attacks the rising degree of complexity and
 sophistication of advanced threats and the need to protect critical infrastructure by promoting and building a resilient system
 to promote the well being of all citizens The workshop covered a wide range of cybersecurity topics permeating the main
 ideas concepts and paradigms behind ICS and blended with applications and practical exercises with overtones to IoT IIoT
 ICS artificial intelligence and machine learning Areas discussed during the ARW included the cybersecurity of critical
 infrastructures its educational and research aspects vulnerability analysis ICS PLC SCADA test beds and research intrusion

Introduction to Parallel and Vector Solution of Linear Systems James M. Ortega,2013-06-29 Although the origins of parallel computing go back to the last century it was only in the 1970s that parallel and vector computers became available to the scientific community The first of these machines the 64 processor Illiac IV and the vector computers built by Texas Instruments Control Data Corporation and then CRA Y Research Corporation had a somewhat limited impact They were few in number and available mostly to workers in a few government laboratories By now however the trickle has become a flood There are over 200 large scale vector computers now installed not only in government laboratories but also in universities and in an increasing diversity of industries Moreover the National Science Foundation s Super computing Centers have made large vector computers widely available to the academic community In addition smaller very cost effective vector computers are being manufactured by a number of companies Parallelism in computers has also progressed rapidly The largest super computers now consist of several vector processors working in parallel Although the number of processors in such machines is still relatively small up to 8 it is expected that an increasing number of processors will be added in the near future to a total of 16 or 32 Moreover there are a myriad of research projects to build machines with hundreds thousands or even more processors Indeed several companies are now selling parallel machines some with as many as hundreds or even tens of thousands of processors
